NEW SERIES

Beginning with this report two additional tables are added to Table 3, the estimated value of shipments, orders and inventory in manufacturing industries grouped according to the Standard Industrial Classification. The additions constitute a further grouping of the seventeen S.I.C. groups into Durable and Non-Durable manufacturing industries. The industries included in the Non-Durable group are 1 - Foods and Beverages, 2 - Tobacco and Tobacco Products, 3 - Rubber Products, 4 - Leather Products, 5 - Textile Products, 6 - Knitting Mills and Clothing, 8 - Paper Products, 9 - Printing and Publishing, 15 - Products of Petroleum and Coal, 16 - Chemical Products, 17 - Miscellaneous Manufacturing Industries; and in the Durable groups are S.I.C. 7 - Wood Products, 10 - Iron and Steel Products, 11 - Transportation Equipment, 12 - Non-Ferrous Metal Products, 13 - Electrical Apparatus and Supplies, 14 - Non-Metallic Mineral Products. These groupings correspond to the durable and non-durable groupings published in the employment and industrial production statistics.

# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

### TREND SUMMARY

Preliminary estimates indicate the following trends for January:

**SHIPMENTS:** - Manufacturers' shipments in January were valued at an estimated \$1,834 million, a decline of almost three percent from the revised December estimate of \$1,884 million. January shipments have been lower than December shipments during the past five years, with the exception of January 1957 when shipments were fractionally higher than December. It is interesting to note that although at a considerably higher level than the previous three years, (January shipments are eight percent higher than in January 1959 and higher than in any previous January), the decline in shipments from the October peak, of thirteen percent, is in line with the usual decline during this period.

The decline in shipments between December and January was fairly general throughout the various industrial groups with only two of the ten economic-use groups, semi-durable consumers' goods and motor vehicles and related industries, and six of the industry groups in the standard industrial classification, leather products, textiles, clothing, transportation, petroleum products and chemical products having higher shipments than in December.

The largest increase in shipments in both relative and absolute terms was in the motor vehicles and related industries group which advanced twenty-four percent in January to \$148 million from \$120 million in the province month. The increase was reflected in the transportation industries grouping under the S.I.C. classification but the divergent movement between shipments in the motor vehicles part of the transportation industry, (it should be pointed out the motor vehicles group is not confined to passenger automobiles but includes trucks and buses also), and the heavy transportation equipment part resulted in a combined increase of less than \$20 million or just under thirteen percent. Shipments in the heavy transportation equipment industries not only declined twenty percent in January from December but it was the only group in the economic-use groupings to show a continuous decline during the year 1959. Shipments in 1959 were eighteen percent lower than in 1958; shipments in January 1960 at \$50 million were only sixty percent of the value of shipments in January 1958 (\$83 million).

In contrast to the general decline in January, shipments in the semi-durable consumers' goods industries have had higher shipments in January each year since 1953. The increase this year was nearly seven percent, from \$96 million in December to \$102 million in January, and at this level was two percent higher than shipments in January 1959 (\$100 million). This movement appears to be part of the seasonal pattern of shipments in these industries which customarily reach a peak in shipments in September and October, decline for the remainder of the fourth quarter and increase through the first quarter of the following year to reach a peak in March. Shipments in 1959 were in total some seven percent above shipments in the previous three years. The increase in S.I.C. groups 4 and 6, leather products and clothing are part of this movement since the large percentage increase, eighteen and one half percent, in shipments in the leather products group is concentrated in the leather footwear industry and the increase in the clothing and knit goods industries of six percent is centred in men's and women's clothing.

Foreshadowing the upward trend in shipments in the semi-durable industries in the first quarter is the increase in shipments in the textile products industries of four percent, which includes such industries as cotton yarn and cloth, synthetic textiles, yarn and cloth and the primary textiles.

**INVENTORIES:** - Levels of inventory at the end of January were relatively unchanged from the end of December, with total inventory owned at \$4,063 million as compared with \$4,057 million at the end of December and total inventory held at \$4,402 million compared with \$4,388 million.

There was more variation in the change in levels of inventory by groups as both goods in process and raw materials stocks fell slightly and stocks and finished products rose by nearly three percent. This increase in finished products inventory combines with the decline in shipments is reflected in a rise in the ratio of inventories of finished goods to shipments to the highest level since the beginning of 1959.

Inventory levels are higher than a year earlier except for inventories held under progress payments arrangements which are nearly twenty-three percent lower. Stocks of raw materials rose fractionally; goods in process (excluding stocks held but not owned) rose by eight percent, and stocks of finished products were nearly five percent higher.

The largest changes in inventory occur in those groups with the greatest change in shipments. Inventory owned in the Heavy Transportation industries, for example, declined by fourteen percent in January to \$98 million as compared with \$114 million in December and by sixteen percent as compared with inventory owned in January 1959 (\$116 million). Inventory held declined somewhat less in January as compared with December as inventory held but not owned rose by two percent; during the past year, however, the decline in this part of inventory was from \$298 million to \$215 million or twenty-eight percent. The increase in inventory owned in motor vehicles and related industries although only two percent higher in January at \$227 million, than in December (\$222 million) is twenty-four percent higher than in January 1959 (\$183 million). The level is actually more comparable with that at the beginning of 1958 than for any of the months between.

ORDERS: - The level of unfilled orders in January moved slightly upward by two percent from December to \$2,194 million continuing the upward trend established during 1959. New orders received in total, being strongly influenced by the value of shipments, fell by three percent. The increase in manufacturing activity during the past year which showed up in the higher level of shipments during the year was, in addition, accompanied by a general rise in the level of unfilled orders; at the end of January this year, the level is seven percent higher than the level a year ago.

The greatest change in unfilled orders over the year shows up in the durable consumer goods industries where unfilled orders this month are over half as much again as at the beginning of 1959. The change in level was in fact at its peak at the end of the third quarter since during the first nine months of 1959 new orders received each month exceeded shipments; during the last quarter new orders fell off to some degree and shipments continued to rise reducing the level of unfilled orders slightly each month. The level at the end of January was almost two percent lower than at the end of December.

The only large change in unfilled orders levels at the end of January as compared with the end of December shows up in the industries producing largely for export where unfilled orders rose to \$171 million from \$141 million. The increase from January 1959 is slightly less than one and one-half percent. The large increase in new orders received monthly over the past year having been accompanied by a comparable increase in shipments has resulted in a fairly stable level of unfilled orders. The increase at the beginning of the year is customary in this group.

TRADING OUTLETS: - Sales through manufacturers' trading outlets increased steadily during 1959 to sustain sales of products of own manufacture during the year at a level five percent greater than in 1958. All industry groups with one exception, the electrical apparatus industry shared in the general increase. Sales of goods of own manufacture in the electrical apparatus industries were only ninety-three percent of the level reached in 1958 but a part of the decline is very likely the result of some of the electrical apparatus manufacturers' discontinuing trading outlets; part of the decline may reflect a decline in sales as manufacturers' shipments in this industry were only two percent higher in 1959 than in 1958, an increase considerably less than the general increase in manufacturers' shipments. Sales through trading outlets in the chemical industries in 1959 increase considerably more than the average in 1959 from \$102 million in 1958 to \$121 million, or eighteen percent.

(1) Includes Pig Iron, Steel Ingots and Castings, Rolled Iron and Steel Products and Ferro-Alloys. (2) The value of Inventory held but not owned in this industry is very small, and sample coverage is not adequate to provide separate data. Estimates of this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned as well.

## INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described on page 57.

CONCEPTS, METHODS AND LIMITATIONS

C O N C E P T S

PLANT SHIPMENTS, ORDERS, AND INVENTORIES (Tables 1, 2, 3, 4, 5 and 7):

Shipments - represent an estimated projection, on a monthly basis, of the latest available Gross Value of Factory Shipments from the annual Census of Industry. In the majority of cases, Census of Industry values include (a) sales from manufacturing plant of products made at the plant, (b) amounts received for repairs or custom work, (c) shipments of goods manufactured in the plant for further processing in another unit of the same company, and (d) shipments of finished products to manufacturers' sales branches for sale, for each establishment included. The value level used is defined as "factory selling value". Goods purchased for re-sale without further processing are not included. (1)

New Orders - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - are defined as estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled. (Since progress payments are treated for this survey as sales in the month received, total unfilled orders reported each month by firms operating on a progress payments basis are reduced by the total of progress accounts for these firms.) This definition of Unfilled Orders is therefore an expression in terms of future shipments values.

---

(1) There are a few exceptions to the definition of Census of Industry values given above:

- (i) In two industries, Sawmills, and Slaughtering and Meat Packing, custom work is valued at the estimated selling value of the product rather than by the amounts received for such work.
- (ii) In nine industries (Fish Processing, Veneer and Plywoods, Sawmills, Pulp and Paper, Non-Ferrous Metals, Smelting and Refining, Coke and Gas Products, Petroleum Products, and Miscellaneous Products of Petroleum and Coal) the Census of Industry values represent production of finished goods rather than shipments. For these industries the Census of Industry values are adjusted by change in finished products inventory before projection for the monthly series.
- (iii) In four industries, Fabricated and Structural Steel, Aircraft, Railroad Rolling Stock and Shipbuilding, the Census of Industry value is for "work done during the year", i.e. production of finished goods plus change in goods-in-process inventory during the year, rather than shipments. For these industries, the Census of Industry values are also adjusted by change in finished products inventory before projection for the monthly series.

There are three industries apart from those listed under (ii) and (iii) above, for which adjustments to Census of Industry values are made before projection for the monthly series. In the Flour Milling, Brewing and Fruit and Vegetable Preparations industries, all of which are characterized by large seasonal variations, many large firms operate on fiscal year periods (which are used in Census of Industry compilations) differing from the calendar year. In unusual years the projection of Census of Industry values for these industries, as if they represent calendar year values, could cause considerable distortion in the estimates. To avoid this, the Census of Industry values from 1954 on have been adjusted to estimated calendar year values before projection. This adjustment is based on values reported to the monthly survey.

Firms operating on long-term contracts represent a special problem for the monthly series. The value levels projected are those of the Census of Industry as described in the first paragraph (except for the four industries described under (iii) above). However, for the monthly series, all progress receipts on long-term contracts are included as sales in the month received, instead of the total sale being included in the month the sale is finalized. It is felt that this treatment gives a better indication of monthly activity but it does allow possible distortion of value levels in that, for the Census of Industry value which is being projected, any final sale will be recorded in one specific year, while the monthly series may have spread this sale over more than one calendar year. Since the bulk of the value of long-term contract work falls in the four industries noted (in (iii) above), for which adjustments for work done are made in compiling the Census of Industry value, this inconsistency does not affect the all-industry or group totals to any great extent.

---

Total Inventory Owned - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of:

- (a) raw materials;
  - (b) goods in process;
  - (c) finished goods of own manufacture at plant and warehouse;
- less (d) value of inventory held but not owned. This item cannot be assigned to specific components.

Since the series relates to manufacturing inventory only, the value of inventory of goods purchased for re-sale without further processing is not included.

Inventory Held but Not Owned - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory - some firms treat progress receipts as sales and reduce book value of inventory as payments are received; in some of these cases they no longer have records of actual holdings above the book value level. Wherever estimates are available, these have been included, but the estimated value of inventory under this heading must be considered, to some extent, incomplete.

Total Inventory Held - represents the estimated total book value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from total inventory owned because of the inclusion of inventory held under progress payments arrangements. It includes items (a) to (c) as shown above under total inventory owned.

Inventory Components: Raw Materials, Goods in Process, and Finished Products, are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to make definitions of components appropriate to each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Table 3, are defined according to the Standard Industrial Classification Manual.

The Economic Use groups of industries (Table 4) were designed to facilitate the analysis of trends by a grouping based on the use made of each industry's products i.e. on the main demand factors affecting each industry. In drawing up this classification the groupings were designed to tie in with National Accounts concepts as closely as possible; as a result the three main groupings - Consumer Goods industries, Capital Goods industries, and Construction Goods industries - contain only industries producing mainly final products in each of these categories. Only industries in which substantially more than half the production is of items clearly belonging to one or other of these three specific categories or industries in which half the production falls into one such category and the remainder is scattered over two or more other categories, were assigned to one of the main groupings. All other industries were assigned to a miscellaneous category which was sub-divided into four further groupings of related industries: Industries Producing largely for Export, Intermediate Goods and Supplies, Motor Vehicles and Related Industries, and a final unclassifiable group. The latter groupings cut across the Economic Use criteria to some extent. For further detail on the considerations leading to the assignment of industries for these groupings reference should be made to the December, 1955 report.

TRADING OUTLETS SALES AND INVENTORIES (Table 8): See page 50.

Trading Outlets are defined as any establishments operated by manufacturers, apart from their plants (or plant warehouses), which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock or which carry small quantities for demonstration purposes are not included. Sales arranged by outlets carrying stock but shipped direct from plant are excluded wherever possible. Inventories of trading outlets include any holdings at warehouses which serve the outlets. Other warehouses, unless they have sales staffs, are excluded.

The Trading Outlets series has two purposes:

- (a) To clarify the manufacturing shipments and inventory series by excluding distribution activity (the extraneous activity which is most commonly included in reports by manufacturers) so that the manufacturing series is confined, as far as possible, to plant activities only at plant value levels;
- (b) To provide as complete and consistent a series as possible on manufacturers' distributional activity, so that this can be combined with the manufacturing series, if desired, for analytical purposes; or combined with data for independent wholesalers to provide a more complete picture of current wholesale activity than has previously been available.

Trading Outlets may or may not be separately incorporated wholesale companies. The majority of them are not separately incorporated. Any separately incorporated wholesale company owned by a manufacturing company or by a group of manufacturing companies is, however, included if the bulk of its sales are of goods manufactured by the owning or associated companies. Since it is obvious from the reports received that almost all unincorporated outlets handle mainly the products of the owning manufacturing company the Trading Outlets series may be taken to represent the activities of establishments the main function of which is to distribute the products of the manufacturing companies which own them.

This series was first published a year ago in the December 1958 bulletin. It is still to some extent in the experimental stage in the sense that the universes which are being projected monthly are not necessarily final, and the levels of the published data are, therefore, subject to revision over the next few years. In addition, only part of the total material collected for the series is considered adequate for publication at this time. It has, however, rectified to a large extent two areas of inconsistency in previous reports, one practical and the other conceptual.

The practical inconsistency was that many companies selling entirely or partially through their own sales organizations find it simpler to report total company sales monthly than to report "shipments leaving plant", which may be either final sales or shipments to their own selling outlets. Such reports were previously accepted in a large number of cases but were used to project the latest available Census of Industry values, which are generally defined as shipments from plant at plant selling value. For many of these companies it has now been possible to arrange for a monthly report covering an estimated value of plant shipments at plant selling value, in addition to the company sales figure. The former is now used for compilation of shipments values for Tables 1 to 5. To the extent that trends in the plant shipments series were being distorted by use of company sales values rather than plant shipments values this change represents an improvement. (It should, however, be noted that the change has not yet been possible in all relevant cases.)

The conceptual inconsistency was that, while shipments represented plant level shipments, the finished products inventories values previously represented total finished products owned by manufacturers, whether held at plant, warehouse or trading outlets, rather than plant finished products only. The two separate series, one for plant, and the other for trading outlets, now each cover sales and inventories for comparable activities.

(It should not, however, be assumed that the plant finished products series and the Trading Outlets inventory series are, when summed, the exact equivalent of the previous manufacturers' finished products series. As a matter of fact, they are reasonably close to being equivalent, but the former finished products series included some retail store operations of manufacturers (retail operations are excluded from the Trading Outlets series) and the Trading Outlet series includes a number of separately incorporated wholesale companies which were not previously included.)

The problems which have been raised by a separate series covering sales and inventories of Trading Outlets are due basically to difficulties of response. The major problems are:

- (a) In the cases remaining where it is still impossible to obtain plant level shipments values on a monthly basis it is often also impossible to obtain plant level finished products inventory holdings separately from Trading Outlets holdings. The inventory breakdown is, in these cases, available only at year-ends. There is, therefore, an element of uncertainty in the monthly finished products trends for the two series when used separately which did not exist when the two elements were combined. For one industry group, Tobacco Products, it was impossible to obtain separate Trading Outlets data, so total finished products inventory values for this group were left in the manufacturing series.

- (b) In a number of cases, Trading Outlet sales and inventory values, while easily available separately from plant values, are not available broken down as between "goods of own manufacture" and "goods purchased for re-sale". This is more often the case with separately incorporated wholesale companies than with other outlets. In most industry groups enough reports are available which distinguish between own and purchased goods to make a separation of values under this heading feasible. For one industry group, Petroleum Products, the separation is, however, not possible, so total sales and inventories have been included under the heading of "goods of own manufacture" for this group.
- (c) In a number of cases where the separation, by the appropriate reporting firms, of plant level shipments and Trading Outlets sales is not yet available it has been possible to estimate Trading Outlets sales of goods of own manufacture on the basis of the total sales figures for the companies concerned and the probable proportion of total sales which are being made through outlets. It did not, however, appear possible to estimate sales of purchased goods in these cases, because of the wide range of ratios of own to purchased goods in the sales values reported by the remaining companies. It is hoped that some improvement can be made in this area in the coming year. In the meantime, with the exception of the Electrical Apparatus and Supplies group where practically no estimating problem occurs, it is felt that the estimates of sales of goods purchased for re-sale do not yet warrant publication. This problem is not so acute for inventory values of goods purchased for re-sale, since year-end values at least are generally available for own and purchased goods separately, but it is felt that publication of this item should be postponed until comparable sales values are available.

Many of the companies operating trading outlets are multiple-unit firms with operations crossing two or more individual industries. No attempt has been made to obtain detail at this level for the Trading Outlets series. This means that the industry-group (e.g. Foods industries, Iron and Steel Industries) is the smallest unit for which data can be shown separately. There are a few cases where outlet operations cut across two industry-groups, and in these cases the values have been assigned to the group in which the bulk of the manufacturers' production falls.

Because of the relatively small number of companies included and because, on the whole, this type of operation tends to be large it can be expected that, when a company gives up its distributing organization or when new organizations are set up, the effect on the series will be to cause considerably larger sudden changes than are common in the plant shipments and inventory series.

#### METHODS

##### (a) Current Estimates -

For eight series (plant shipments, raw materials, goods in process, plant finished products, inventory held but not owned, unfilled orders, trading outlets sales, and trading outlets inventories,) current value estimates for each industry covered are made by applying the monthly percentage changes shown by the unweighted group of reporting firms in each industry to the latest available benchmark values for the same industries. Industries not covered are carried at the latest available benchmark levels.

(The above is subject to a few exceptions. In one industry, reporting firms are treated as a stratum sample, rather than as an unweighted group. In three industries, available physical data on stocks and shipments are valued using price indexes. In three industries, shipments estimates are based on employment data and price indexes.)

Total inventory held in each industry is the sum of the estimated values for raw materials, goods in process, and finished products. Total inventory owned in each industry is calculated by deducting the estimated value for inventory held but not owned from estimated total inventory held. Value of new orders in each industry is derived from estimated shipments and unfilled orders using the formula "Unfilled Orders at end of previous month plus Net New Orders during month less Shipments during month equals Unfilled Orders at end of Current month".

##### (b) Benchmark Revisions -

As new benchmarks become available, estimates for the year to which the benchmarks apply are revised as follows:

- For the plant shipments series, the Census of Industry value for the year for each industry is spread by months according to the trend shown by reporting firms in the original estimate for that year.

- For the trading outlets sales series, the estimated value for the year, obtained from the Annual Trading Outlets survey, for each industry is spread by months according to the trend shown by reporting firms in the original estimate for that year.

- For the five basic inventory series (raw materials, goods in process, plant finished products, inventory held but not owned and trading outlets inventory) and the unfilled orders series, where the benchmark values apply to the Year-End rather than to the entire year as in the shipments series, the error in the original estimate for the year-end for each industry is assumed to have accumulated equally over all twelve months of the year (i.e., one-twelfth of the amount of the error is added to the original estimate for January; two-twelfths is added to the original estimate for February; three-twelfths to March and so on).

- The three derived series (total inventory held, total inventory owned, and new orders) are re-calculated on the basis of the revised data for the other six series.

#### LIMITATIONS TO THE USES OF THE DATA IN THIS REPORT

- (1) Data for individual industries should not be interpreted as commodity data, since very few industries produce only one commodity or only one class of commodities.
- (2) Since the series are in terms of current values, changes over time may be the result of both price and volume changes. Some indication of the extent to which changes in value are due to price changes, thus isolating the physical change which has taken place, can be obtained by reference to the wholesale price index. This procedure is, however, inadequate for anything more than a general indication of trends. The main problem is that the wholesale price index is a commodity price index, while the shipments, orders, and inventory series are industry series with the possibility of changes in commodity content over time. These changes in commodity content could seriously affect the weighting pattern to be applied to price indexes considered applicable for any specific industry. In considering inventory values turnover rates and valuation methods are other important variables which should be taken into consideration but for which adequate data are seldom available.
- (3) Shipments data do not necessarily represent market sales for the manufacturing universe.  
(a) Apart from the few exceptions as noted under (b) below they are defined (see page 57) to include total movement of goods out of manufacturing plants (or, in some cases, divisions of plants); shipments of goods for further processing by other plants of multiple-unit companies are, therefore, included as well as shipments for sale. (b) In a few special cases, the Census of Industry values include goods in-process change, and for these cases progress receipts on long-term contracts are included as shipments as they occur, rather than at the time sales are finalized. (c) Many manufacturers re-sell purchased goods, in addition to sales of their own products and these re-sale items are not included.
- (4) The component breakdown for inventories is on an establishment, not a commodity, basis. Since each manufacturer reports inventories as on his own books, both for the monthly and annual surveys, and since a number of industries contain plants at various stages of processing, the finished products for one plant might represent commodities which would be considered raw materials or goods in process for another plant in the same industry. The composition of each industry must be studied before attempting to use the component breakdown as applicable to the industry as such, rather than to the firms in the industry.
- (5) For Unfilled Orders, the following reservations apply:
  - (a) The series, by definition, excludes plants producing entirely for stock. Since approximately 40% of manufacturing is done by such plants the trends shown are not necessarily applicable to manufacturing in general.
  - (b) Since the series is defined as "unshipped" orders, rather than "unproduced" orders, there is always the probability that some of the Unfilled Orders are accounted for in inventory holdings. The reduction of unfilled orders by progress receipts eliminates to a considerable extent the effect of large goods-in-process holdings in connection with long-term contracts, but the amount of the remaining inventory, either goods-in-process or finished products, which is held in connection with existing unfilled orders would be difficult to evaluate.
  - (c) The series includes total orders, not just those considered as "binding", so estimates of future shipments trends based on these may be overstated due to the possibility of cancellations.
  - (d) Unfilled Orders for all industries include to some extent a duplication due to the fact that orders for final products in one industry may result in orders to firms at secondary or primary stages of processing. Since the total gross value of shipments will contain the same duplication, this does not invalidate the series for purposes of analysis. However, the total impact of any one order on future shipments levels will not necessarily be shown in the Unfilled Orders series since at any stage an order may be filled from stock rather than added to existing backlogs.

- (6) The Economic-Use grouping of industries (Table 4). The difficulties involved in classifying both commodities, and industries on the basis of commodities made, are sufficient to limit the usefulness of this compilation to indications of trends only. The main difficulty is that many commodities may be used for different purposes which cut across classification lines. Depending on the use made of it, the same product may be a "final" product or a component part; or a final product may be used for consumption, capital equipment, or in construction. A second difficulty is that the basic data for this survey are in terms of estimates for individual industries not for commodity data. An industry is a group of establishments primarily concerned with the production of a specified product or class of products. Many establishments produce other commodities in addition to those with which they are primarily concerned and, as a result, very few industries can be considered "pure" in the sense that they produce only the product or class of products implied in their title. Therefore, many industries which might fall quite clearly into specified groups on the basis of the chief use of their main products are much less clear-cut when the additional commodities produced in the establishments concerned are considered.

In this classification only those industries in which substantially more than half the production is of items clearly belonging to a specified grouping or in which half the production is of such items and the remainder is scattered over two or more groups were assigned to the main categories; all industries which could not be so assigned were placed in the "Unclassifiable" category. This means that the inclusion of extraneous commodities is kept to a minimum. It does not, unfortunately, do anything about the fact that each category does not necessarily include all important relevant items. The grouping that is most seriously affected by the forced exclusion of relevant items is the Durable Goods sub-group of the Consumer Goods category. It does not contain the consumer portion of the Automobile industry and, in addition, it does not include the stove portion of Heating and Cooking Apparatus, since the latter industry had to be assigned to the Unclassifiable group. On the other hand, it does include two large industries with important production of items which should not be assigned to Consumer Durables - these are the Furniture industry, which produces office and store furniture as well as household furniture; and the Radios and Parts industry which also produces electronic equipment. The sub-category "Other Capital Goods Industries" contains the highest proportion of industries in which only about half of total production actually should be assigned to the specific grouping but where the remainder of production is dispersed over a number of other groupings. It is, however, felt that this dispersion is not so likely to result in distortion as is possible with the large specific items involved in the Consumers' Durable Goods group.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries group. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

TABLE 7. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 8. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

### TREND SUMMARY

Preliminary estimates indicate the following trends for February:

**SHIPMENTS:** - Manufacturers' shipments in February were valued at \$1,822 million, an increase of slightly more than two per cent over the revised January estimate of \$1,782 million and nearly five per cent higher than shipments in February 1959, of \$1,742 million. The upward movement of shipments in February follows the same trend as last year with the decline in monthly shipments from the October high being reversed in February. In the two previous years the downward movement continued until March.

The increase in shipments in February was general; shipments in both the durable and non-durable industry groups were higher in about the same proportion and have in fact followed a similar pattern from December to February. Only three of the S.I.C. groups of industries had lower shipments in February than in January, foods and beverages, where the decline from \$347.9 million to \$347.0 million was negligible; transportation, where shipments fell from \$169 million to \$165 million, a decline of just over two per cent; and petroleum products industries where the drop from \$127 million to \$123 million was, in percentage terms, just over three and one half per cent. In absolute terms the total decline in shipments of \$9.5 million was less than one fifth of the total increase in shipments of \$49.5 million leaving a net increase in all industries of \$40 million.

The largest increase in shipments in both percentage and absolute terms was in the clothing industry where shipments rose to \$76.9 million from \$62.8 million in January, an increase of \$14 million or twenty-two per cent. A large increase in shipments in this industry is customary at the beginning of the year and in fact the level reached in the first two months this year is below that of last year by about three per cent.

Shipments in the tobacco industry, which have been rising steadily during the last four years have shown a considerable rise again in the first two months of this year.

Turning to the Economic-Use groupings the changes in shipments in the S.I.C. groups discussed above are reflected in the appropriate group here. One further change should perhaps be commented on and that is shipments in the heavy transportation equipment industries which are part of the capital goods industries. This group includes the aircraft industry, railroad and rolling stock equipment industry and the shipbuilding industry, all of which are included in S.I.C. group 11 along with the motor vehicles industry and the motor vehicles parts and accessories industry. The breakdown of S.I.C. 11 into these two economic-use groups shows up the contrast between them. Shipments in February in the motor vehicles and related industries fell by slightly less than three per cent from shipments in January, but in the first two months of this year were slightly higher, (1.5%) than in the first two months of last year. Shipments in 1959 were ten per cent above 1958 shipments although they did not regain the levels reached in either 1957 or 1956. In the heavy transportation equipment industries on the other hand, although shipments in February were three per cent higher than in January, shipments in the first two months of the year were only seventy-two per cent of the value of shipments in the first two months of 1959. Shipments in both 1959 and 1958 fell steadily from the 1957 level and in 1959 total annual shipments were only seventy-four per cent of the 1957 value.

**INVENTORIES:** - Levels of inventory in manufacturing industries at the end of February were higher than at the end of January. Since inventories held under progress payments rose at a rate (1.7%) comparable with inventories owned (1.5%), both total inventory owned, at \$4,131 million, and total inventory held, at \$4,472 million, were 1.5% higher than at the end of January. Inventory held at the end of January was valued at \$4,405 million and inventory owned at \$4,069 million.

All components of inventory held were higher with the largest increase shown in goods in process inventory. Raw materials inventories were \$1,963 million up one per cent from \$1,944 million at the end of January; goods in process inventories at \$1,172 million were two per cent above January's level of \$1,148 million, and finished products inventories at \$1,337 million were just less than two per cent above the \$1,313 million held at the end of January.

Although the level of inventories of finished products at the end of February this year was five per cent higher than at the same time last year, the ratio of finished products inventory to shipments in February was the same in both years, 0.73. The higher ratio reflects the customary decline in shipments from November to January.

Inventory levels at the beginning of this year reflect the general increase in manufacturing activity during the past year. The upward trend in inventory which began in December 1958 levelled off during the summer of 1959 and had risen steadily since August. This movement has carried total inventories almost up to the 1957 levels.

The two largest swings in inventories which are shown up in comparison of February 1960 with February 1959 holdings are in the transportation industries where inventory owned in the heavy transportation industry group is fifteen per cent lower this year and inventory in the motor vehicles industry group is twenty-eight per cent higher than last year's holdings.

The decline in inventory levels between February 1959 and this month in the economic-use group of industries producing largely for export reflects the decline in levels in the non-ferrous metals industries (S.I.C. 12) and in the paper products industries (S.I.C. 8). The decline in paper products is negligible, from \$338 million in February 1959 to \$334 million this month; inventory levels in this industry have been very stable for the past three years although shipments were nine per cent higher in 1959 as compared with 1958. The decline in non-ferrous metals inventories however, from \$291 million in February 1959 to \$263 million this month may indicate a downward trend in this industry as inventories in total have moved downward since July of last year. Shipments however, were higher in 1959 than in 1958 or than in any year since the previous peak in 1956 and the level goods in process inventory has been fairly stable.

ORDERS: - New orders in February were valued at \$1,802 million, down 2.5% from \$1,848 million in January and were lower than the value of shipments in this month. The level of unfilled orders which was reduced by less than 1% from the January level remains at a level higher than in any month since the middle of 1958 and nearly 11% higher than in February a year ago.

TRADING OUTLETS: - Sales through manufacturers' trading outlets in the first two months of the new year are not only down from the level of sales in the final quarter of the previous year, a movement comparable with the trend in both 1957 and 1958, but have also fallen off from the level of sales in January and February a year ago. The decline is not large, January sales at \$212 million are just less than two per cent below sales in January 1959, \$215 million, and February sales at \$222 million are down slightly less than two per cent from February sales a year ago, \$227 million. Nor is the decline general as increases are shown in the electrical apparatus industries, iron and steel industries, chemical industries and the all other group of industries. The increase in sales in the chemical and iron and steel industries is not only large - sales in the chemical industries in the first two months of the year, at \$17.8 million, are five per cent higher than sales in the first two months of 1959, \$16.9 million; sales in the iron and steel industries at \$41 million are up nineteen per cent from the first two months of 1959, \$34 million - but in both industry groups follows three years of steadily rising sales.

Declines in sales are shown in the foods and beverages industries, the rubber industries, wood and paper and petroleum and coal industries.

(1) Includes Pig Iron, Steel Ingots and Castings, Rolled Iron and Steel Products and Ferro-Alloys. (2) The value of Inventory held but not owned in this industry is very small, and sample coverage is not adequate to provide separate data. Estimates of this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned as well.

### INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the December 1959 report, page 79.

## CONCEPTS AND SOURCES

For further detail, and for description of methods used, see December, 1959 report, page 79.

C O N C E P T S

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all industry held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 52 of the bulletin.

S O U R C E S

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries group. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

TABLE 7. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 8. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

TREND SUMMARY

Preliminary estimates indicate the following trends for March:

**SHIPMENTS:** - Manufacturers' shipments in March were valued at \$1,959 million, an increase of nearly seven per cent over the revised February estimate of \$1,837 million and three and one half per cent higher than shipments in March 1959 of \$1,893 million. The upward trend of shipments in the first three months of this year is following a trend similar to last year although at a slightly higher level as shipments in the first quarter this year have been nearly five per cent above shipments in the first quarter of 1959.

The increase in March was general with all industry groups showing increased shipments as compared with February. The durable goods industries showed shipments in March of \$846 million an increase of nearly nine per cent over February shipments of \$778 million with increases ranging from two per cent in the non-ferrous metal products industries to nineteen per cent in the transportation equipment industries. In the non-durable goods industries shipments were five per cent higher in March at \$1,113 million than in February at \$1,058 million with the increases ranging from three and one half per cent in the leather products industries to almost thirteen per cent in the tobacco and tobacco products industries.

The increased shipments in March were also fairly general as compared with shipments in March a year ago. Five only of the industry groups in the Standard Industrial Classification groupings had lower shipments than a year ago; the rubber products group, which was down by two per cent, leather products, by nearly four per cent, textile products and the clothing industries, by just over two per cent and seven per cent respectively and the non-metallic mineral products industries by seven per cent. The increases in the eleven groups showing increases ranged from one per cent in the foods and beverages and electrical products industries to fifteen per cent in the non-ferrous metal products industries. The transportation and chemical products industries had shipments two per cent higher this March than last; shipments in the wood products industries were up by three per cent, iron and steel products industries by five per cent, the petroleum products industries and miscellaneous manufacturing industries by seven per cent; shipments in the paper products industries were ten per cent higher this March than last and in the tobacco products industries were up by fourteen per cent.

The decline in the clothing and textile industries was reflected in the semi-durable consumers goods group which showed a decline of four per cent in shipments this March as compared with last. The separation of heavy transportation equipment industries from the motor vehicles and related industries in the economic-use groupings brings out the contrast between the movement in these two parts of the transportation group. Shipments in the heavy transportation equipment industries were down by fourteen per cent as compared with shipments last year although March shipments were nearly eight per cent higher than February shipments. In the motor vehicles and related industry group shipments were eight per cent above shipments last March and twenty-two per cent higher than shipments in February. The construction goods industries also showed a decline in shipments in March this year as compared with shipments last March of seven per cent reducing the value of total shipments from these industries in the first three months of 1960 to just one per cent higher than shipments in 1959, although shipments in both January and February had been running six per cent higher than last year.

**INVENTORIES:** - Levels of inventory held in manufacturing industries at the end of March of \$4,494 million were only slightly higher than inventory holdings at the end of February of \$4,462 million. Since inventory held under progress payments, i.e. inventory held but not owned, fell by nearly three per cent, from \$334 million in February to \$325 million in March, inventory owned at the end of March at \$4,170 million was one per cent higher than inventory owned at the end of February of \$4,128 million.

Both raw materials and goods in process inventories showed slight declines in March but finished products were nearly three per cent higher in March, at \$1,377 million, than in February, at \$1,340 million. Since the increase in finished products inventory to the highest level for many years took place in a month when shipments rose even more, the ratio of finished products inventory to shipments fell in March to 0.70 from the ratio of 0.74 and 0.73 shown in January and February.

Changes in raw material and goods in process inventory holdings in March were minor in all industry groupings with the possible exception of the wood products industries, the iron and steel products industries and the chemical products industries in the S.I.C. groupings and in the economic use groupings in the construction goods industries and motor vehicles and related industries.

The wood products industries customarily show an increase in raw materials holdings in March each year along with generally stable goods in process. The movement this year with raw materials up by five per cent and goods in process up by one per cent thus appears to be in line with past years. Inventories of finished products are up by nearly nine per cent from February and shipments have continued to rise as is customary during the first quarter.

Raw materials inventory in the iron and steel industry group have remained stable during the first quarter but goods in process inventory rose by three per cent in March as compared with February and finished products inventory are higher also by nearly three per cent also sustaining the increase in shipment of nearly eight per cent in this month. Although inventories of finished products are at the highest level, in this industry for many months the ratio of finished inventory to shipment has dropped to 0.87 this month from 0.92 in February and appears to be in line with the usual March level.

In the chemical products industries raw materials inventories are down by just over three per cent in March as compared with February while goods in process inventories are up by three per cent. Inventories of finished products which have risen fairly steadily from 1956 are six per cent higher this month than in March 1959.

The increase in inventories in the construction goods industries, as the increase in shipments, reflects the pressure of seasonal activity in the construction industry in this country. All components of inventory holdings in this industry rose by three per cent in March as compared with February.

The change in inventory holdings in the motor vehicles and related industries was downward; raw materials and finished products inventories changed only slightly but goods in process fell by just over six per cent. Inventory levels in this industry are however well above levels in 1959 with finished products inventories over one third higher than last year's.

The increase in finished products inventories was general through all industry groups in line with the customary rise in shipments at the end of the first quarter. Inventories in the foods and beverages industries did not show in the rise since the seasonal pattern in the processed foods industries results in peak inventories in early autumn followed by a gradual decline through the first half of the following year.

ORDERS: - Although new orders received in March rose to \$1,946 million from \$1,817 million in February, the value was lower than shipments during the month which left unfilled orders at the end of March fractionally lower than at the end of February. The level of unfilled orders has fallen in both February and March this year but at \$2,193 million is ten per cent higher than at the end of the first quarter in 1959 of \$1,993 million.

TRADING OUTLETS: - Sales through trading outlets in March, at \$233 million, rose by six per cent from the level of February sales of \$220 million. Increases were shown in each industry group with the exception of the wood and paper industries where the decline was fractional.

Sales in March this year were however four per cent below sales in 1959 and in fact during the first quarter sales in total were three per cent below sales in the first quarter last year. The lower level of sales this year is accounted for by the decline in sales in the rubber industries and in the petroleum and coal industries. Sales in the rubber industries were nine per cent lower in March this year than last and ten per cent lower in the first quarter as compared with sales in the first quarter of 1959. Sales in the petroleum and coal industries were seven per cent lower in March and also seven per cent lower in the first quarter this year as compared with sales in 1959.

(1) Includes Pig Iron, Steel Ingots and Castings, Rolled Iron and Steel Products and Ferro-Alloys. (2) The value of Inventory held but not owned in this industry is very small, and sample coverage is not adequate to provide separate data. Estimates of this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned as well.

# INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the December 1959 report, page 79.

## CONCEPTS AND SOURCES

For further detail, and for description of methods used, see December, 1959 report, page 79.

C O N C E P T S

Shipments - (Tables 1 to 5)- represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all industry held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 52 of the bulletin.

S O U R C E S

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries group. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

TABLE 7. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 8. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

TREND SUMMARY

Preliminary estimates indicate the following trends for April:

SHIPMENTS: - Manufacturers' shipments in April were valued at \$1,919 million, a decrease of four percent from the revised March estimate of \$1,997 million. Although the upward trend in shipments did not persist through April, cumulative shipments for the four months of 1960 of \$7,536 million, are 3% above the corresponding value for last year of \$7,319 million.

It is interesting to note that in six of the last eight years total shipments have registered a decline in April from March levels. The exceptions are 1958 and 1959. The current year, 1960, seems to revert to a more usual seasonal fluctuation. Certain of The Economic-Use Classification industry groups tend to bear out this pattern. Semi-durable consumers' goods industries have declined in April for each of the last eight years; heavy transportation equipment seven of the last eight years; durable consumers' goods six of the last eight years; industries producing largely for export, intermediate goods, and unclassifiable industries five of the last eight years.

The decrease in April was reflected in all the Standard Industrial Classification groups except three where gains of about 1% were made. The three were: foods and beverages, paper products, and non-metallic mineral products. The largest percentage declines were recorded in tobacco and tobacco products (24%) leather products (13%), miscellaneous manufacturing industries (11%), knitting mills and clothing (10%), and transportation equipment industries (9%). The largest value declines were in iron and steel products (\$17 million or 7%), transportation equipment industries (\$20 million or 9%) and tobacco and tobacco products (\$7 million or 24%).

In the Economic-Use groupings only one group, industries producing largely for export, recorded an increase in shipments of \$2 million or 0.7%. The decline of 4% in consumers' goods industries was centered in a \$11 million or 9% decrease in semi-durable consumers' goods although, in value terms perishable and durable together decreased almost as much, viz., \$6.6 million and \$3.7 million, respectively.

INVENTORIES: - Levels of inventory in manufacturing industries at the end of April were lower by \$7.8 million, or 0.2 percent than the revised March level of \$4,476 million but 2 percent above April 1959. Inventory owned by manufacturers declined 0.3 percent but increased 5 percent over April 1959. Inventory held under progress payments declined by 1 percent but were down 29 percent from April 1959.

Raw materials inventories declined by 0.6 percent; goods in process inventories increased by 0.6 percent and finished products inventories declined by 0.2 percent.

The total inventory owned to shipments ratio and the finished products to shipments ratio both advanced reflecting the lowered shipments but relatively unchanged inventory values. For April the former ratio is 2.18 up from the March value of 2.10 and from the April 1959 value of 2.00. The latter ratio was 0.72 for April, 0.70 for March and 0.65 for April, 1959.

ORDERS: - New orders declined in April nearly 9% from the March level of \$2,038 million to \$1,864 million, and 5% from the April 1959 level of \$1,967 million. New orders received for the first four months of 1960 are over 4% higher than for the first four months of 1959.

The decreases in new orders and shipments left the level of unfilled orders in April down only 2.5% from \$2,247 million to \$2,191 million. This, however, is 11% higher than the April 1959 value of \$1,972 million. Unfilled orders fell in all but one of the industry groups classified according to the Economic-Use Classification. The exception was heavy transportation equipment which increased by 0.6%. The largest percentage declines were shown in perishable consumers, goods industries (9%) industries producing largely for export (10%), intermediate goods and supplies (7%), and motor vehicles and related industries (7%).

TRADING OUTLETS: - Sales through trading outlets in April, at \$233 million were 7% down from the revised March level of \$251 million. Decreases were shown in each industry group except wood and paper products, iron and steel industries and purchased goods in the electrical apparatus industries.

(1) Includes Pig Iron, Steel Ingots and Castings, Rolled Iron and Steel Products and Ferro-Alloys. (2) The value of Inventory held but not owned in this industry is very small, and sample coverage is not adequate to provide separate data. Estimates of this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned as well.

## INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the December 1959 report, page 79.

## CONCEPTS AND SOURCES

For further detail, and for description of methods used, see December, 1959 report, page 79.

C O N C E P T S

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all industry held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 52 of the bulletin.

S O U R C E S

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries group. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

TABLE 7. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 8. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

v  
TREND SUMMARY

Preliminary estimates indicate the following trends for May:

SHIPMENTS: - Manufacturers' shipments in May were valued at an estimated \$1,971 million, an increase of three percent over the revised April value of \$1,921 million but a decrease of two percent from the May 1959 level of \$2,005 million. Cumulative shipments for the first five months at \$9,508 million are two percent higher than the corresponding value last year of \$9,324 million.

Although shipments for the first three months of 1960 are about five percent above the first three months of 1959, the trend does not seem to be continuing at this higher level. January-April 1960 shipments are only three percent above the like 1959 value and January-May 1960 shipments are two per cent of the like 1959 value. Four of the industry groups classified according to the Standard Industrial Classification declined in May but the decline in value terms is slight. The highest percentage increases were recorded by non-metallic mineral products industries (11%); chemical products industries (7%); tobacco and tobacco products industries (6%); and foods and beverages industries (5%). The last named industry accounted for nearly forty per cent, or \$19 million, of the increase in shipments in May. Iron and steel products industries accounted for a further twenty per cent, or \$10 million. The remaining part of the increase was scattered among the other ten groups.

In the Economic-Use classification of industries the advance in shipments appears fairly uniformly distributed among the groups. Only two groups show declines; semi-durable consumers' goods (7%), and motor vehicles and related industries (1%). The largest percentage increases were in construction goods industries (9%), and heavy transportation equipment industries and intermediate goods industries (6% each).

INVENTORIES: - The preliminary estimate of the value of inventory owned by manufacturers at the end of May is \$4,185 million - a small decrease (0.3%) from the revised April value of \$4,196 million but over five per cent higher than the May 1959 value. These comparative changes are similar to the corresponding percentage changes for April.

The value of inventory held by manufacturers (which includes inventory owned and the value of progress payments) at \$4,479 million decreased slightly (0.1%) in May from April but increased nearly three per cent from May 1959.

Inventory components show little change from April: raw materials inventory is lower by 0.3%; goods in process inventory is higher by 0.2%; finished products inventory is lower by 0.1%. Larger changes, however, show up in year over year comparisons. Finished products inventory is nine per cent higher this May than last. Raw materials inventory is two and one half per cent higher this May. Goods in process inventory is lower by nearly four per cent. However, subtraction of progress payments from goods in process leaves the May 1960 value seven per cent higher than the corresponding May 1959 value. Progress payments are lower this May from last by twenty-five per cent. The decrease is centered in the transportation industries. Progress payments this May have increased, however, from the April value by two per cent.

As there was virtually no change in inventories levels from April to May the three per cent increase in shipments is reflected in the ratio of total inventory

owned to shipments by a decrease from 2.18 to 2.12. The same ratio last May was 1.98. The shipments increase was similarly reflected in the ratio of finished products to shipments by a decrease from 0.73 to 0.71. The same ratio last May was 0.64.

ORDERS: - Unfilled orders declined \$20 million or 1% from \$2,199 million in April to \$2,178 million in May. With May shipments of \$1,971 million, the decline in unfilled orders was balanced by new orders at a level of \$1,951 million. The new orders at this level are 4% higher than the level for April but 5% lower than the level for May 1959.

Unfilled orders were lower in May for six industries grouped according to the Economic-Use Classification. The largest declines in unfilled orders were in the motor vehicles and related industries (10%), and industries producing largely for export (8%). The largest increases in unfilled orders were in semi-durable consumers goods (11%), and in heavy transportation equipment industries (3%). Some notable changes in unfilled orders are made this May over May 1959. This May, perishable consumers goods industries are down 24%, durable consumers goods industries up 27% and total consumers goods industries up 14% from the May 1959 value. Heavy transportation equipment industries are up 29% and other capital goods industries are up 12% leaving total capital goods industries up 23% from May 1959 values. The motor vehicles and related industries are down 22% this May from last.

TRADING OUTLETS: - Sales through manufacturers' trading outlets in May at \$219 million are 7 per cent below the revised April value of \$234 million and 4 per cent below the May 1959 value. Outlet sales declined in the iron and steel industries by 2 per cent and in the petroleum and coal industries by 15 per cent. Increases of 3 per cent were shown in foods and beverages industries, 2 per cent in rubber industries, 7 per cent in wood and paper industries, 7 per cent in chemical industries and 3 per cent in all other industries. There was virtually no change in the electrical apparatus industries.

(1) Includes Pig Iron, Steel Ingots and Castings, Rolled Iron and Steel Products and Ferro-Alloys. (2) The value of Inventory held but not owned in this industry is very small, and sample coverage is not adequate to provide separate data. Estimates of this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned as well.

## INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the December 1959 report, page 79.

## CONCEPTS AND SOURCES

For further detail, and for description of methods used, see December, 1959 report, page 79.

C O N C E P T S

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all industry held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 52 of the bulletin.

S O U R C E S

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries group. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

TABLE 7. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 8. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

### TREND SUMMARY

Preliminary estimates indicate the following trends for June:

SHIPMENTS: - Manufacturers' shipments in June were valued at an estimated \$2,012 million, an increase of one percent over the revised May estimate of \$1,995 million but a decrease of four percent from the June 1959 value of \$2,099 million. Cumulative shipments for the first two quarters of 1960 at \$11,544 million were one percent higher than the corresponding value last year of \$11,424 million.

The one percent increase is the result of higher (by five percent) shipments in the first quarter but lower (by three percent) in the second quarter. Second quarter 1960 shipments are less than six percent higher than first quarter 1960 shipments; last year the second quarter was higher by over fourteen percent. However, in all these, and similar comparisons, it should be noted that both 1959 shipments and 1960 shipments are two rather non-typical series. Shipments in 1959 reached an all-time high in dollar value and in the first six months, rose with only a slight hesitation in May to a peak in June. Shipments in 1960 are somewhat unusual in starting from a high level in January and rising rapidly to a high peak in March.

In the Standard Industrial Classification grouping of industries, four groups showed declines in June: knitting mills and clothing of six million dollars (9%), transportation equipment industries of ten million dollars (5%), petroleum and coal products industries of two million dollars (1%), and chemical products industries of four million dollars (3%).

Increases in shipments in the industry groups classified according to the Standard Industrial Classification were generally small with the largest increases as follows: tobacco and tobacco products industries of five million dollars (22%), non-metallic mineral products industries of six million dollars (11%) and miscellaneous manufacturing industries of two million dollars (5%). The shipments declines were reflected in three groups of industries grouped according to the Economic-Use Classification, viz., semi-durable consumers' goods industries of six million dollars (6%), motor vehicles and related industries of thirteen million dollars (8%), and industries producing intermediate goods and supplies of five million dollars (2%). However, semi-durable consumers' goods industries have declined each June since 1953, as have motor vehicles and related industries except for 1959 when an increase was recorded. The intermediate goods industries show shipments declines each June except in 1953 and 1959.

INVENTORIES: - The preliminary estimate of the value of total inventory owned by manufacturers at the end of June was \$4,197 million, a decline of 0.3 percent from the revised May value of \$4,210 million but an increase of 6 percent from the June 1959 value of \$3,944 million.

Total inventory held by manufacturers, at \$4,500 million, declined 0.1 percent from the revised May value of \$4,505 but increased 3.5 percent from the June 1959 value of \$4,346 million. The difference of \$303 million between inventory owned and inventory held represents the value of inventory held under progress payments arrangements. The June value is higher by 2.7 percent than the revised May value but is 24 percent lower than June 1959. Nearly all of the change from June 1959 is attributable to the transportation equipment industries.

Inventory components showed only fractional changes from May. Raw materials and goods in process inventories were both down 0.4 percent; finished products inventory was up 0.5 percent; goods in process inventory minus progress payments was down 1.5 percent. Inventory components showed larger changes from June 1959. Raw materials inventory was up 3.5 percent; goods in process down 3.3 percent; finished products up 10 percent.

Current manufacturing inventory is at the high levels of 1957. The peak value that year of inventory owned of \$4,167 million was recorded in October and the revised May 1960 value of \$4,210 million is about 1 percent higher than the 1957 high. Some structural differences in the accumulation are noticeable. Durable goods inventory represented 48.3 percent of total manufacturing inventory at the end of the first quarter 1957 and 46.9 percent at the end of the first quarter 1960. It should be noted that the data in the following Tables are not seasonally or price adjusted.

Changes in inventory owned were nominal among the industries classified according to the Standard Industrial Classification. Ten groups showed decreases ranging to a maximum of 4 percent. Six groups showed increases ranging to a maximum of 3 percent. Greater changes show up in year over year comparisons. The larger increases from June 1959 to June 1960 were: rubber products (17%), textile products (9%), wood products (18%), iron and steel products (12%), electrical apparatus and supplies (13%), and miscellaneous manufacturing industries (9%). Only two industry groups had a lower inventory in June 1960 than in June 1959. They were foods and beverages (0.5%) and non-ferrous metal products (3%).

Among the industry groups classified according to the Economic-Use Classification, none showed a decrease in inventory owned from June 1959. The larger increases were: other capital goods industries (10%), construction goods industries (14%), and motor vehicles and related industries (11%). Changes among these groups from revised May to June values show the largest declines in perishable consumers' goods industries, (7%), and motor vehicles and related industries, (6%), and four other (nominal) declines. Heavy transportation equipment industries, increased 3% and three other industry groups had nominal increases.

As there was virtually no change in inventory levels or in shipments levels from May to June, the inventory to shipments ratios were little changed. The ratio, total inventory owned to shipments, moved from the May value of 2.11 to 2.09 in June. The same ratio last June was 1.88. The ratio, finished products to shipments, was unchanged in June from 0.70 in May. The value last June was 0.61.

ORDERS: - Unfilled orders declined \$32 million or 1.5% percent, from the revised May value of \$2,170 million to \$2,138 million in June. This value is 4 percent higher than the June 1959 value of \$2,058 million. New orders received in June were \$14 million, or 0.7 percent, above the revised May value of \$1,966 million, but 8 percent below the June 1959 value of \$2,147 million.

Unfilled orders were higher in June for only three industries grouped according to the Economic Use Classification. They were: semi-durable consumers' goods industries (6.3%), durable consumers' goods industries (1%), and other capital goods industries (0.4%). The declines in the other groups were nominal, the three largest being perishable consumer's goods industries (5%), motor vehicles and related industries (3.5%), and heavy transportation equipment industries (3.3%).

TRADING OUTLETS: - Sales through manufacturers' trading outlets in June at \$228 million were 5 percent above the revised May value of \$218 million and 10 percent below the June 1959 value of \$254 million. Outlet sales increased in all the groups except two: iron and steel industries declined 2 percent and chemical industries declined 1 percent. Increased outlet sales were in: foods and beverages industries, (3%), rubber industries, (10%), wood and paper industries, (9%), electrical apparatus industries, (11%), petroleum and coal industries, (5%), and all other industries, (4%).

Inventories held at manufacturers' trading outlets increased by 0.7 percent at the end of June to \$291 million from the revised May value of \$289 million. Most groups changes were nominal. The larger changes were: foods and beverages industries up 4 percent, rubber industries down 5 percent, electrical apparatus down 3 percent, and petroleum and coal industries up 3 percent.

(1) Includes Pig Iron, Steel Ingots and Castings, Rolled Iron and Steel Products and Ferro-Alloys. (2) The value of Inventory held but not owned in this industry is very small, and sample coverage is not adequate to provide separate data. Estimates of this type of Inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned as well.

## INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the December 1959 report, page 79.

## CONCEPTS AND SOURCES

For further detail, and for description of methods used, see December, 1959 report, page 79.

CONCEPTS

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all industry held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 52 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries group. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

TABLE 6. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 7. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

REVISIONS TO PREVIOUSLY PUBLISHED ESTIMATES

SHIPMENTS:- This edition contains the annual revision of monthly shipments data utilizing the latest available census values.

Data for 1958 have been adjusted to agree with the gross value of factory shipments as compiled and just released by the Annual Census of Industry. These values for 1958 will not normally be subject to further revision and may be taken as final.

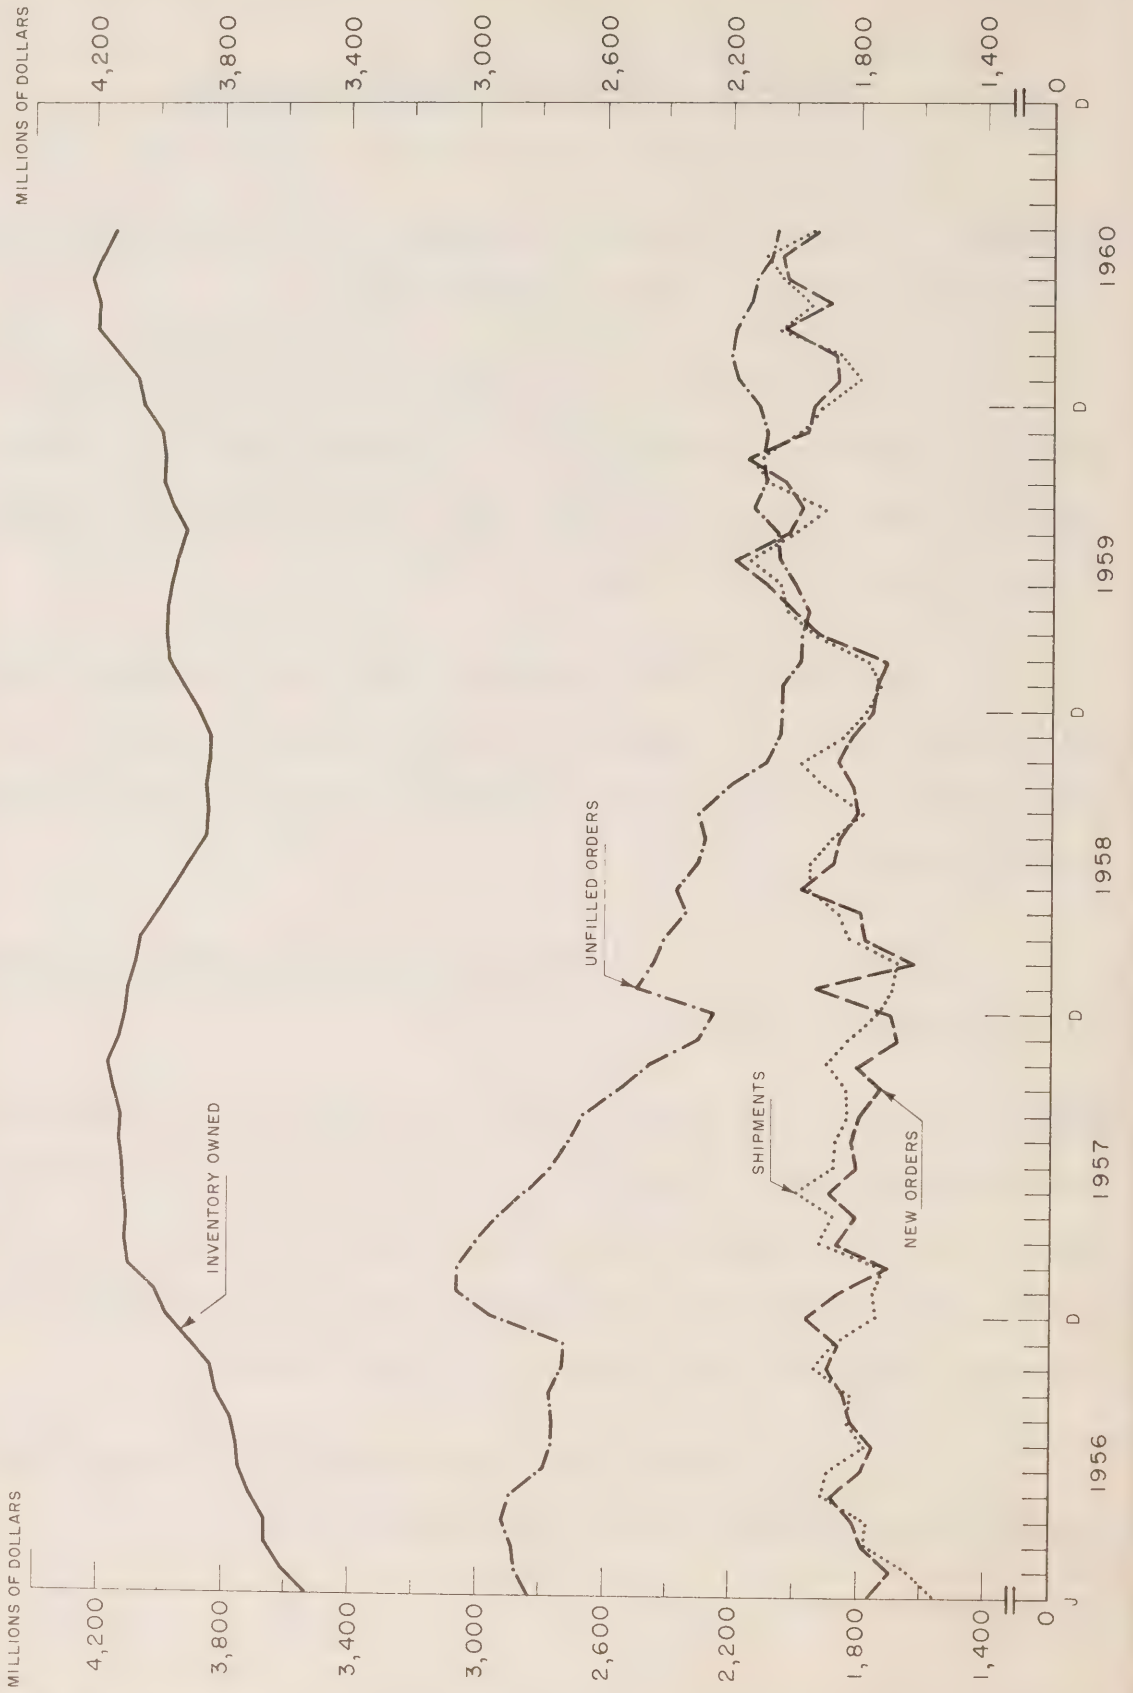

Estimates for 1959 and 1960 to date, have been revised using the 1958 values as a base instead of the 1957 values as formerly. This data is subject to further revision as census values for years after 1958 become available.

Sample coverage has been improved in a few industries where fuller coverage was desirable.

ORDERS:- Values for the orders data have been revised to utilize the latest available census values. The value of unfilled orders at the end of 1958 derived from the Census of Industry has been used as the base for revised monthly 1958, 1959 and 1960 to date values. Data for 1958 may be considered final while subsequent data is subject to further revision.

Since the shipments data and unfilled orders data have been revised, the new orders series has been re-calculated.

# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

TREND SUMMARY

Preliminary estimates indicate the following trends for July:-

**SHIPMENTS:** - Manufacturers' shipments in July were estimated at \$1,943 million, a decrease of over seven percent from the revised June estimate of \$2,096 million and a decrease of four percent from the July 1959 estimate of \$2,017 million. A seasonal decline for July would be in the order of two percent from June.

Cumulative shipments for the first seven months at \$13,740 million were fractionally higher than the corresponding value last year of \$13,684 million. However, shipments were five percent higher in the first quarter and two percent lower in the second quarter than the corresponding quarters of 1959. Further, shipments in the second quarter of 1960 were only seven percent above the first quarter whereas last year the corresponding increase was fourteen percent. However, for the first half of 1960, shipments compare to the 1959 first half, although last year was a record year. In considering a trend for the second half of 1960, it is worth noting that in four of the last five years of this survey, shipments in the first half year have been somewhat less than half the annual value.

Shipments declined in all except two groups of industries classified according to the Standard Industrial Classification. The two were knitting mills and clothing (2 percent) and petroleum products (4 percent). The larger percentage declines were as follows:- tobacco and tobacco products (20 percent), rubber products (11 percent), leather products (8 percent), textile products (9 percent), iron and steel products (9 percent), transportation equipment (28 percent), and chemical products (17 percent). The largest dollar declines were in iron and steel of \$24 million, transportation equipment of \$54 million, and chemical products of \$23 million.

The shipments declines were reflected in the economic-use groupings as follows: durable consumers' goods (10 percent), heavy transportation equipment (10 percent), other capital goods (14 percent), motor vehicles and related industries (33 percent), and intermediate goods (11 percent). However, four of the five (except heavy transportation equipment) have shown declines in July for each of the last eight years.

**INVENTORIES:** - The preliminary estimate of the value of total inventory owned by manufacturers at the end of July was \$4,140 million, a decrease of 1.0 percent from the revised June estimate of \$4,180 million but an increase of 6 percent from the July 1959 value of \$3,914 million.

Total inventory held at \$4,432 million declined 1.1 percent from the June value of \$4,479 million but increased 3 percent from the July 1959 value of \$4,302 million. Inventory held under progress payments arrangements of \$292 million declined 2.5 percent from June and 25 percent from July 1959. Most of the latter change occurred in the transportation equipment industries.

Inventory components showed the following changes from June to July: raw materials up 0.4 percent, goods in process down 2.9 percent, finished products down 1.6 percent, and goods in process minus progress payments down 3.1 percent. Changes in components from July 1959 to July 1960 were: raw materials up 1.7 percent, goods in process down 3.1 percent, finished products up 10.8 percent, and goods in process minus progress payments up 7.9 percent.

There has been some easing of the high levels of inventory owned from the May peak although the levels are generally as high as those recorded in 1957. The July decline, however, is less than seasonal. It appears that the accumulation of inventories is slackening but is still high.

Similar trends have been observed in the United States. There, July business inventories of manufacturers and distributors were reduced in the first month-to-month decline since last December according to a Business News Report released by the U.S. Department of Commerce. The report comments that the rate of accumulation had been declining in the last several months.

Among the industries classified according to the Standard Industrial Classification, the largest percentage declines in inventory owned were in tobacco and tobacco products (5 percent), and in transportation equipment industries (6 percent). Only four groups showed increases but all changes were nominal except the above-noted. Six groups show notable increases over July 1959: rubber products (13 percent), textile products (10 percent), wood products (15 percent) iron and steel products (11 percent), electrical apparatus and supplies (10 percent), and miscellaneous manufacturing industries (12 percent).

Among the industries classified according to the Economic-Use Classification, all groups (with one exception) showed changes ranging to 3 percent. The exception, motor vehicles and related industries, showed a decline of 9 percent. All groups showed increases over July 1959 ranging up from 3 percent. The largest percentage increases were: construction goods (12 percent), motor vehicles and related industries (9 percent), and other capital goods (9 percent).

The ratios, total inventory owned to shipments, and finished products to shipments were 2.13 and 0.71 respectively in July and 1.99 and 0.67 respectively in June. The same ratios last July were 1.98 and 0.63 respectively.

**ORDERS:** - Unfilled orders declined \$16 million or 0.8 percent from the revised June value of \$2,077 million to \$2,061 million in July. The July 1960 value is 0.1 percent higher than July 1959. New orders received in July at \$1,927 million were 6 percent lower than those received in June of \$2,046 million and 5 percent lower than those received in July 1959 of \$2,020 million.

Unfilled orders were changed only fractionally in most industrial groups classified according to the Economic-Use Classification. The largest changes were: perishable consumers' goods up 5 percent and heavy transportation equipment down 3 percent.

**TRADING OUTLETS:** - Sales through manufacturers' trading outlets in July at \$222 million were 3.5 percent below the revised June value of \$230 million and 7.6 percent below the July 1959 value of \$240 million. Outlet sales declined in all the groups except rubber industries (5 percent) and petroleum and coal industries (1 percent). The larger declines in sales were: foods and beverages (10 percent), electrical apparatus (14 percent), chemical industries (15 percent) and all other industries (11 percent).

Inventories held at manufacturers' trading outlets increased 2 percent to \$302 million in July from \$296 million in June, and increased 9 percent from \$278 million in July 1959. The larger changes from June were: rubber industries down 4 percent, and petroleum and coal industries up 7 percent.

(1) Includes Pig Iron, Steel Ingots and Castings, Rolled Iron and Steel Products and Ferro-Alloys. (2) The value of inventory held but not owned in this industry is very small, and sample coverage is not adequate to provide separate data. Estimates of this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned as well. (3) For revised shipments and orders for January to June 1959, see pages 59 to 61.

# INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the December 1959 report, page 79.

## CONCEPTS AND SOURCES

For further detail, and for description of methods used, see December, 1959 report, page 79.

CONCEPTS

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all industry held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturer apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 52 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries group. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

TABLE 6. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 7. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

TREND SUMMARY

Preliminary estimates indicate the following trends for August:

**SHIPMENTS:** - The value of manufacturers' shipments in August is estimated at \$1,970 million, an increase of four percent from July and nearly four percent higher than shipments in August last year. Although shipments during the first quarter of this year were higher than in 1959 the margin fell from January to March and for the second quarter, and in July, they were lower than shipments last year. By the end of July aggregate shipments this year had dropped down to the same level as last year and only the somewhat unseasonal advance in shipments this August has sustained them at this level. The declining trend in shipments during the second quarter, however, and the very large drop in April this year should not obscure the fact that to sustain shipments at last year's level is to maintain a very high level indeed.

The largest increase in shipments in August were in the consumers' semi-durable and durable goods industries, in the construction industries and in the miscellaneous industries producing intermediate goods and in the unclassifiable group. Shipments from the semi-durable consumer industries this month were also higher than shipments in August last year and the aggregate shipments this year have been maintained at last year's level; in the consumer durable goods industries, however, shipments this month are nearly fifteen percent lower than last year and total shipments this year are down over eight percent. In the motor vehicle industry group, which is not included with consumer durables, shipments, although lower in August than in July by nearly ten percent, were up by thirty percent from August last year and are being sustained at last year's level.

In the standard industrial classification groupings, the two industrial groups showing the largest increases from the previous month's shipments are leather products and clothing. The very large increase in factory shipments of clothing in August of fifty-one percent is only slightly higher than the increase last year and is the customary seasonal pattern in the industry. Aggregate shipments for 1960 in this industry are still slightly below total shipments in the first eight months of last year. The increase in shipments in the leather products industry chiefly reflects the seasonal increase in shipments in the footwear industry and, although the increase in August shipments as compared with July was much greater than usual, from \$15.7 million to \$27.8 million, the aggregate shipments in the first eight months of the year are still more than ten percent lower than shipments in the corresponding period of 1959.

Shipments in the primary textile industries, chemical products industries and the miscellaneous group of industries were all up by ten percent or more in August as compared with July. Although an increase in shipments in the textile industries is customary in August this year's increase is much greater than usual. A greater than usual increase in shipments in the chemical industries in August this year as compared with last only partly reflects higher shipments this month, it is also partly the result of lower than normal shipments in this industry group in 1959. Similarly the consistently high level of shipments in this industry group this year is underlined in contrast with shipments last year when second quarter shipments were depressed by internal difficulties in the industry group.

**INVENTORY:** - Total inventory owned by manufacturers at the end of August at \$4,147 million was down fractionally from the July figure of \$4,148 million but up five percent from the August 1959 figure of \$3,965 million.

Total inventory held, at \$4,439 million, decreased fractionally from the July figure of \$4,443 million but increased two percent from the August 1959 figure of \$4,371 million. Inventory held under progress payments arrangements declined one percent from July and twenty-eight percent from August 1959. Most of the latter change occurred in the transportation equipment industries.

Inventory components showed the following changes from July to August: raw materials up 0.1 percent, goods in process up 2.1 percent, finished products down 2.1 percent, and goods in process minus progress payments up 3.2 percent.

The easing of the high levels of inventory since the May peak has been centred in finished products and, to a much lesser extent, in goods in process. Raw materials have increased slightly from May. Although the August decline is less than seasonal the lowering of total inventory since

May is considerably greater than can be attributed to seasonal change. Further, the levels of inventory recorded this year have been the highest since 1957 and examination of this period reveals some interesting points. A gradual shift in comparative concentration of goods in process to finished products has been taking place throughout this period. The concentration of raw materials has remained fairly steady at forty-four percent of total inventory. Goods in process, however, have declined from twenty-seven percent to twenty-five percent; finished products have increased from twenty-eight percent to thirty. These changes are reflected in the ratio of finished products to shipments. This ratio has shown considerable fluctuation in reflecting both shipments and finished products but it has shown a persistent trend to higher values in 1960 from 1957. During 1959 however, the unusually high level of shipments evidently held sway over inventory changes and the ratio was driven down considerably.

Non-durable goods inventory as a percentage of total inventory has shown an upward trend since mid-1957. The percentage in 1957 averaged for the year was just over forty-seven percent; for 1960 the average to date is close to fifty percent.

Among the industry groups classified according to the Standard Industrial Classification the largest percentage changes in inventory owned were in tobacco and tobacco products (-7.3%), transportation equipment industries (+6.5%), and leather products (-3.4%). Only five groups showed increases from July but fifteen showed inventory values above August 1959.

Among the industry groups classified according to the Economic-Use Classification the largest changes in inventory owned were in heavy transportation (+7.1%), and motor vehicle and related industries (+3.6%).

The ratio of stocks of finished products to shipments fell in August to 0.68 from the July high of 0.73, and the ratio of total inventory owned to shipments declined to 2.10 from 2.19 in the preceding month. The corresponding ratio was 2.08 in August 1959.

**ORDERS:** - Unfilled orders declined three percent from the revised July value of \$2,072 million to \$2,015 million in August. Among the industry groups classified according to the Economic-Use Classification, the largest changes were as follows: perishable consumers' goods industries down 18%, semi-durable consumers' goods industries down 12%, industries producing largely for export down 11%, motor vehicles and related industries up 11%. The largest changes from August 1959 were: perishable consumers' goods industries down 40%, industries producing largely for export up 39%, motor vehicles and related industries down 21%, and industries producing intermediate goods and supplies down 19%.

**TRADING OUTLETS:** - Sales through manufacturers' trading outlets in August at \$234 million were 7.2 percent above the revised July value of \$219 million. All groups showed reduced inventories and higher sales from July with two exceptions: rubber goods industries had lower (3.3%) sales and petroleum and coal industries had higher (1.3%) inventories. The largest increases in sales were: petroleum and coal (9.9%), wood products (9.7%), and iron and steel (9.4%). Declines in inventory ranged from 1.4% to 6.8%.

# INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the December 1959 report, page 79.

## CONCEPTS AND SOURCES

For further detail, and for description of methods used, see December, 1959 report, page 79.

C O N C E P T S

Shipments - (Tables 1 to 5)- represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all industry held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 52 of the bulletin.

S O U R C E S

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries group. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

TABLE 6. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 7. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

## TREND SUMMARY

Preliminary estimates indicate the following trends for September:

SHIPMENTS: - The value of manufacturers' shipments in September was estimated at \$2,022 million, an increase of 1.6 percent from the revised August value of \$1,991 million, but a decrease of 2.7 percent from the September 1959 value of \$2,079 million.

Shipments for 1960 to date have maintained their edge over last year although this edge has been gradually reduced from almost five percent for the first quarter to 0.2 percent for the three quarters. However, any comparison of current shipments with last year must recognize that 1959 shipments were at a record high level and that the seasonal patterns in each year have been markedly different. In 1959, shipments built up month by month from a low level at the beginning of the year to a peak in June, fell off sharply in July and August before rising to another high peak in October. In 1960, shipments started at a high level which has been maintained although the initial and large decline at the beginning of the second quarter was repeated again in July at the beginning of the third quarter wiping out the advance which had taken place in May and June. Increased shipments in August and September have brought third quarter 1960 shipments up to \$5906 million, two percent below third quarter shipments in 1959 and three percent below second quarter shipments this year.

Although, total shipments of all manufacturing industries for 1960 to date have shown little change from the same period last year changes of some magnitude have occurred among the different industrial groups. In the Economic-Use Classification, the total consumers' group, total capital goods group, and construction goods industries all scored declines in this period from last year. Only in the miscellaneous group was any increase recorded. In this group, industries producing largely for export increased \$256 million (which amount almost compensates for the declines in the other groups) and gains also were recorded in the intermediate goods and supplies industries and the unclassifiable industries. The greatest declines were in motor-vehicles and related industries of two percent, the heavy transportation equipment industries of fourteen percent and construction goods industries of seven percent. For this same nine month period, the larger changes from 1959 among the Standard Industrial Classification major groups were: non-ferrous metallic mineral products up eleven percent, miscellaneous manufacturing up twenty-six percent, transportation equipment industries down six percent, rubber goods down seven percent, leather goods down ten percent.

Examination of the current month-to-month changes shows that the largest increases in shipments from August to September among the industries grouped according to the Standard Industrial Classification were recorded in tobacco and tobacco products of nineteen percent, transportation equipment industries of twenty-seven percent, electrical products industries of twelve percent and miscellaneous manufacturing industries of eight percent. Declines in the Standard Industrial Classification Major Groups were minor in percentage terms.

Among the industries classified according to the Economic-Use Classification, three groups showed declines over August, viz. perishable consumers' goods of one percent, construction goods of two percent and industries producing largely for export of two percent. The larger increases were: durable consumers' goods of seven percent, heavy transportation equipment industries of six percent, and motor vehicles and related industries of thirty-four percent.

INVENTORIES: - Total inventory owned by manufacturers at the end of September of \$4,140 million was down fractionally from the revised August total of \$4,148 million but up four percent from the September 1959 total of \$3,991 million.

Total inventory held, of \$4,419 million was down slightly from the revised August value of \$4,441 million but up nearly one percent from the September 1959 value of \$4,383 million. Inventory held under progress payments arrangements at a September value of \$279 million were down five percent from the revised August value of \$293 million and down twenty-nine percent from the September 1959 value of \$392 million. The large year to year decline occurred mostly in the transportation industries.

Inventory components showed some interesting changes. Raw materials were down one percent, goods in process down 0.3 percent, finished products were virtually unchanged, and goods in process minus progress payments were up 1.3 percent.

Since the recent peak value in October 1957, raw materials inventory has, until recently, shown a persistent downward trend. The decline in value terms halted in the last quarter of 1959 but the decline of raw materials as a percentage of total inventory held has been continuing in 1960. Raw materials inventory in 1960 is evincing a fairly level trend with more moderate swings than have characterized its movements in the last few years. Goods in process inventory in 1957 and 1958 remained at a steady level but declined in 1959 and in 1960. The fluctuations in goods in process inventory shown in 1959 have been duplicated in 1960 with remarkable fidelity but a lower level. Finished products inventory, declining throughout most of 1958, reached a low level at the year end. During early 1959, finished products rapidly built up to a peak in March and fell back during the following months as shipments were increasing. In 1960, the pattern is similar to that of 1959. The accumulation of finished products at a considerably higher level than 1959, built up rapidly to a high in March and went on to a slightly higher peak in June. Since June, finished products have declined rapidly although the preliminary September value shows a levelling off.

Among the industry groups classified according to the Economic-Use Classification, all groups except perishable consumers' goods showed increases in total inventory owned since September 1959. The largest increase was in construction goods of eight percent. The other groups showed increases of five percent or less. Changes from August for these groups show moderate declines for six groups and increases for four groups. Three of the increases were quite nominal but the fourth, motor vehicles and related industries, showed an eight percent increase.

These August-September changes were reflected in the Standard Industrial Classification by eleven groups scoring decreases and five groups increases. The declines were five percent for tobacco and tobacco products, four percent for knitting mills and clothing and lesser percentages for the other groups showing decreases. The increases were nominal except for transportation equipment which shows a six percent increase.

The ratio of finished products to shipments fell from 0.68 in August to 0.67 in September. The ratio of total inventory owned to shipments fell from the August value of 2.08 to the September value of 2.05. The ratios in last September were 0.60 and 1.92, respectively.

ORDERS: - Unfilled orders declined one percent from the revised August value of \$2,011 million to the preliminary September value of \$1,997 million. The current September value is five percent below the September value of \$2,093 million.

Among the industry groups of the Economic-Use Classification the following increases in unfilled orders were: perishable consumers' goods (2%), motor vehicles and related industries (3%),

Declines were nominal except for semi-durable consumers' goods (13%) and industries producing largely for export (3%).

New orders increased four percent from the revised August value of \$1,929 million to \$2,009 million in September and declined one percent from \$2,035 in September 1959.

TRADING OUTLETS: - Sales through manufacturers' trading outlets in September at \$244 million showed a three percent increase over the revised August value of \$237 million but a seven percent decrease from the September 1959 value of \$262 million. Most groups shared in the August to September increase although the few declines were moderate in percentage terms. Inventories held at trading outlets increased two percent but the increase in total largely reflected the increase in petroleum and coal inventory of \$8 million. Most groups showed lower inventories in September.

## INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the December 1959 report, page 79.

## CONCEPTS AND SOURCES

For further detail, and for description of methods used, see December, 1959 report, page 79.

C O N C E P T S

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 52 of the bulletin.

S O U R C E S

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries group. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

TABLE 6. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 7. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

## TREND SUMMARY

Preliminary estimates indicate the following trends for October:

**SHIPMENTS:** - The value of manufacturers' shipments in October was estimated at \$2,023 million, a decrease of 2.2 percent from the revised September value of \$2,069 million and a decrease of 5.5 percent from the October 1959 value of \$2,142 million. Shipments for the year to date, at \$19,772 million were \$35 million lower than the comparable 1959 value of \$19,807 million.

Shipments during the first quarter of this year were much higher than the first quarter of 1959 but the edge initially held has been gradually eroded throughout the year until for the first time this year, the cumulative total is lower than similar total of 1959. Usually, first quarter shipments are the lowest of the four quarters and, in fact, have been the lowest for the last eight years averaging less than twenty-four percent of the annual volume. Shipments are usually heaviest during the second quarter with the fourth quarter next but averaging nearly one percent less. Third quarter shipments are usually close in value to fourth quarter shipments. During the fourth quarter, shipments have tended recently to follow quite closely two distinct seasonal patterns depending on the fall peak. Generally there are three peaks in the annual shipments series: one in March, another in May or June and the last in September or October. In 1954 and 1955 the fall peak was in September and the decline for the remaining months of the year was quite moderate. Since 1956 the fall peak has been in October and the decline to the end of the year was sharp, holding fairly closely to ten percent, and apparently uniform. These two patterns have kept the value of fourth quarter shipments quite consistently between twenty-five and twenty-six percent of the annual value. The extensive declines this October are more typical of 1954 and 1955 than the years since in which the fall peak was recorded in October with most groups showing increases during the month. There is too, as a point of interest, a distinct similarity in the movements of the raw data between 1955 and 1960 particularly since May.

Declines were recorded in all the groups of both the Standard Industrial Classification and the Economic-Use Classification except for the transportation group in the former and heavy transportation equipment and motor vehicles and related industries in the latter. Among the larger declines were iron and steel products (8 percent), non-ferrous metal products (7 percent) and chemical products (8 percent). These three groups accounted for \$41 million or half of the gross decrease in shipments. The only increase in the Standard Industrial Classification groups was in the transportation group of 31 percent or \$36 million which left a net decrease in shipments of \$45 million. The increase was reflected in the Economic-Use groups, heavy transportation equipment, of 9 percent or \$4 million and motor vehicles and related industries of 32 percent or \$31 million. It should be noted that the two transportation groups of the Economic-Use groups are not identical to the transportation group of the Standard Industrial Classification.

**INVENTORIES:** - Total inventory owned by manufacturers at the end of October of \$4,131 million was down fractionally from the revised September value of \$4,137 million, but up 4 percent from the October 1959 value of \$3,986 million.

Total inventory held, of \$4,412 million was virtually unchanged from September but up fractionally from the October 1959 value of \$4,385 million. Inventory held under progress payments arrangements increased two percent from \$275 million in September to \$281 million in October but decreased thirty percent from October 1959. The latter change occurred chiefly in the transportation industries.

Inventory components appeared to follow through the shifts noted last month. Raw materials were up 0.3 percent, goods in process were down 0.6 percent, finished products were virtually unchanged while goods in process minus progress payments were down 1.4 percent.

Among the industries classified according to the Standard Industrial Classification, three groups showed large dollar changes in inventory owned for October. The first, foods and beverages, increased \$16 million or 2 percent. This increase is of a seasonal nature occurring during the latter half-year and falling off in December. The second large change was a \$13 million or 1.8 percent decline in iron and steel products. This change is not unusual for this group in size or direction but possibly is a continuation of a long-term cyclical downturn from the peak in May, in its turn built up gradually from a low in the last quarter of 1958. The last large dollar change, in chemical products, was an

increase of \$11 million or 4.6 percent. This change is a normal response to a seasonal accumulation which usually start to build up in the last quarter and declines during the first half to a low plateau in the summer.

The above large changes were not reflected very clearly in the Economic-Use groupings. Many of the industries causing the large changes in the Standard Industrial Classification groups do not lend themselves to easy classification in the Economic-Use groupings and are in the miscellaneous groupings where their changes are not easily noticed. However, intermediate goods and supplies increased \$18 million or 2.8 percent and the change reflects a large part of the above-noted changes in the Standard Industrial Classification groups.

Other changes in October were considerably smaller in volume and none were large in percentage terms. Changes since October 1959 show moderate increases for most groups. Larger changes show paper products up 7.3 percent, non-ferrous metal products up 8.1 percent, electrical apparatus and supplies up 12.3 percent, miscellaneous manufacturing industries up 7.0 percent and leather products down 7.1 percent.

The ratio, total inventory owned to shipments, moved to 2.04 in October from 2.00 in September and 1.86 last October. The ratio, finished products to shipments, moved to 0.67 in October from 0.65 in September and 0.58 last October.

**ORDERS:** - The preliminary estimate of the value of unfilled orders at the end of October was \$1,966 million, down 1.2 percent from the revised value at the end of September of \$1,989 million and down 6.6 percent from the October 1959 value of \$2,105 million. The decline from September was centred in a \$22 million drop in the capital goods industries of the Economic-Use groupings. The other larger changes from September were a decrease of \$5 million in the unclassifiable industries and a \$6 million increase in the intermediate goods and supplies industries. The large changes from October 1959 were a 27 percent drop in perishable consumers' goods, a 7.7 percent drop in heavy transportation, a 9.7 percent drop in motor vehicles and related industries, a 19.3 percent drop in intermediate goods and supplies and a 18.2 percent increase in industries manufacturing largely for export.

The value of new orders in October of \$2,000 million was 2.3 percent below September and 7.1 percent below October 1959.

**TRADING OUTLETS:** - Sales of goods of own manufacture through manufacturers' trading outlets in October were estimated at \$242 million a decrease of 0.4 percent from September and a decrease of 5.6 percent from October 1959. Changes among the trading outlet groups were generally small with the following exceptions: wood and paper down 7 percent, electrical apparatus down about 14 percent, products of petroleum and coal up 4 percent, and chemical industries down 10 percent.

Inventories held at manufacturers trading outlets at the end of October were estimated at \$295 million, a decrease of 2 percent from September, and an increase of 1 percent from October 1959. Changes were generally small, the largest in percentage terms being an increase in foods and beverages of 5 percent and a decrease of 4 percent in the iron and steel industries.

(1) Includes Pig Iron, Steel Ingots and Castings, Rolled Iron and Steel Products and Ferro-Alloys. (2) The value of Inventory held but not owned in this industry is very small, and sample coverage is not adequate to provide separate data. Estimates of this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned as well.

# INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the December 1959 report, page 79.

For further detail, and for description of methods used, see December, 1959 report, page 79.

C O N C E P T S

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 52 of the bulletin.

S O U R C E S

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries group. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

TABLE 6. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 7. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

## TREND SUMMARY

Preliminary estimates indicate the following trends for November:

**SHIPMENTS:** - The value of manufacturers' shipments in November was estimated at \$2,022 million, little changed from the revised October value of \$2,023 million but nearly two percent higher than the November 1959 value of \$1,986 million. Shipments for the eleven months of 1960 were valued at \$21,795 million and were virtually unchanged from the similar 1959 total of \$21,793 million.

Shipments in 1960 have been maintained very close to the record levels of 1959 and unless December shipments fall off to an unusual extent, 1960 will probably see a level of shipments only slightly below that of 1959. Usually October to November sees a large decline in shipments. Last year the decline for this period was over seven percent while for 1958 the decline was over six percent. November to December declines are also usually fairly severe. However the final months of 1960 have some indications that December, like November, will not fall into the more usual pattern of considerable decline. Instead, 1960 shipments levelled off at a fairly high level early in the fall and, if repeating the trend of similar previous years, will remain at a fairly high level without significant decline.

Among the major groups of the Standard Industrial Classification, ten groups showed decreases and six increases. Of the latter, the largest were paper products of \$9.8 million or five percent and transportation equipment of \$9.5 million or six percent. Inspection of the tables below will show that the increase in paper products was largely a reflection of a \$9.2 million increase in pulp and paper mills. Further, paper boxes and bags increased by \$0.7 million, and these two industries account for the major part of the change in the group total. The other major group mentioned above as having a large increase, transportation equipment, reflects the increase in the motor vehicles industry. This increase can be seen better in the motor vehicles and related industries group of the Economic Use Classification. This group showed an increase of six percent or \$8.1 million. It is worthy of note that the increase in pulp and paper mills is not easily seen in the Economic Use Classification where it is classified under industries manufacturing largely for export although this group showed an increase of \$3 million or 0.9 percent.

Decreases in November shipments in value terms were greatest in: foods and beverages of \$5.6 million or 1.4%, knitting mills and clothing of \$6.5 million or 7.0 percent, non-ferrous metal products of \$4. million or 2.4 percent, and non metallic mineral products of \$3.3 million or 5.4 percent. These decreases accounted for \$19.4 million of the gross declines of \$26.4 million. The gross increases of \$25.7 million left a net decline of \$0.7 million from October.

**INVENTORIES:** - Total inventory owned by manufacturers at the end of November of \$4,149 million was up 0.4 percent from the revised October value of \$4,131 million and up 3.8 percent from the November 1959 value of \$3,997 million.

Total inventory held by manufacturers at the end of November of \$4,417 million was up 0.3 percent from the revised October value of \$4,406 million and up 1.7 percent from the November 1959 value of \$4,342 million. Inventory held under long-term contracts (progress payments) were \$268 million in November, down 2.3 percent from October, and down 22.4 percent from November 1959.

Inventory components showed the following changes: raw materials up 0.4 percent, goods in process up 0.6%, goods in process minus progress payments up 1.5 percent and finished products down 0.2 percent. Much of the increase in raw material and goods in process can be attributed to the foods and beverages group, the tobacco and tobacco products group, and the chemical products group. The decline in finished products centred around three industry groups; wood products, paper products and transportation equipment. For major groups 3,4,5,6,14,17 there was no appreciable value shift in components.

Among the industries classified according to the Standard Industrial Classification ten groups showed small increases in percentage terms. Six groups showed very small decreases in percentage terms. The largest value changes were an increase in foods and beverages of \$14.5 million, and an increase in chemical products of \$7.8 million. Both these increases were in response to seasonal influences and the October-November increases are usually about this magnitude. The largest decrease in value terms was in wood products of \$4.8 million or two percent. This decline was also part of a seasonal fluctuation. Wood products inventory varies considerably during the year from a high in March to a low usually in November.

Among the industries grouped according to the Economic Use Classification, October-November percentage changes were small. Perishable consumers goods were up 1.6 percent or \$11 million and the total consumers sector up 0.8 percent or \$9 million. The total capital goods sector was up 1.6 percent

or \$6.6 million reflecting increases in both heavy transportation equipment and other capital goods industries. Among the miscellaneous industries, intermediate goods and supplies showed a 2.2 percent or \$15 million increase. Industries manufacturing largely for export showed a 1.1 percent or \$8 million decrease.

The November ratio of total inventory owned to shipments was 2.05 compared to 2.04 in October and 2.01 in November 1959. The ratio of finished products to shipments was unchanged at 0.67 in November and was up from 0.63 last November.

ORDERS: - The value of unfilled orders at the end of November of \$1,898 million declined 1.6 percent from \$1,930 million in October and declined 9.3 percent from \$2,093 million in November 1959.

The total of consumers groups was up 2.5 percent reflecting moderate value increases in both perishable and semi-durable consumers goods and a decline in durable consumers goods. Total capital goods was down 0.8 percent reflecting a large dollar decline in heavy transportation equipment and a small dollar decline in other capital goods. Construction goods declined by \$11.6 million or 3.4 percent. Industries producing largely for export showed a large decrease of \$20.7 million or 14 percent.

New orders received in November at \$1,991 million increased 1.4 percent from \$1,964 million in October and increased 0.8 percent from \$1,975 million in November 1959.

TRADING OUTLETS: - Sales of goods of own manufacture through manufacturers' trading outlets in November were estimated at \$233 million down 1.8 percent from the revised October value of \$238 million and down 4.9 percent from the November 1959 value of \$245 million. Outlet sales were down in the rubber industries by 23%, in the iron and steel industries by 18% and in all other industries by 12 percent. The larger increases in outlet sales were in foods and beverages (6%) and "own goods" of electrical apparatus industries (7%).

Inventories held at manufacturers trading outlets at the end of November of \$300 million were up 1.4 percent from October and up 1 percent from November 1959. The largest changes from October were foods and beverages up 3.9 percent and iron and steel industries down 2.1 percent.

(1) Includes Pig Iron, Steel Ingots and Castings, Rolled Iron and Steel Products and Ferro-Alloys. (2) The value of Inventory held but not owned in this industry is very small, and sample coverage is not adequate to provide separate data. Estimates of this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned as well.

# INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the December 1959 report, page 79.

## CONCEPTS AND SOURCES

For further detail, and for description of methods used, see December, 1959 report, page 79.

C O N C E P T S

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification grouping of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. List of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 52 of the bulletin.

S O U R C E S

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries group. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

TABLE 6. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 7. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

REVISIONS TO PREVIOUSLY PUBLISHED ESTIMATES

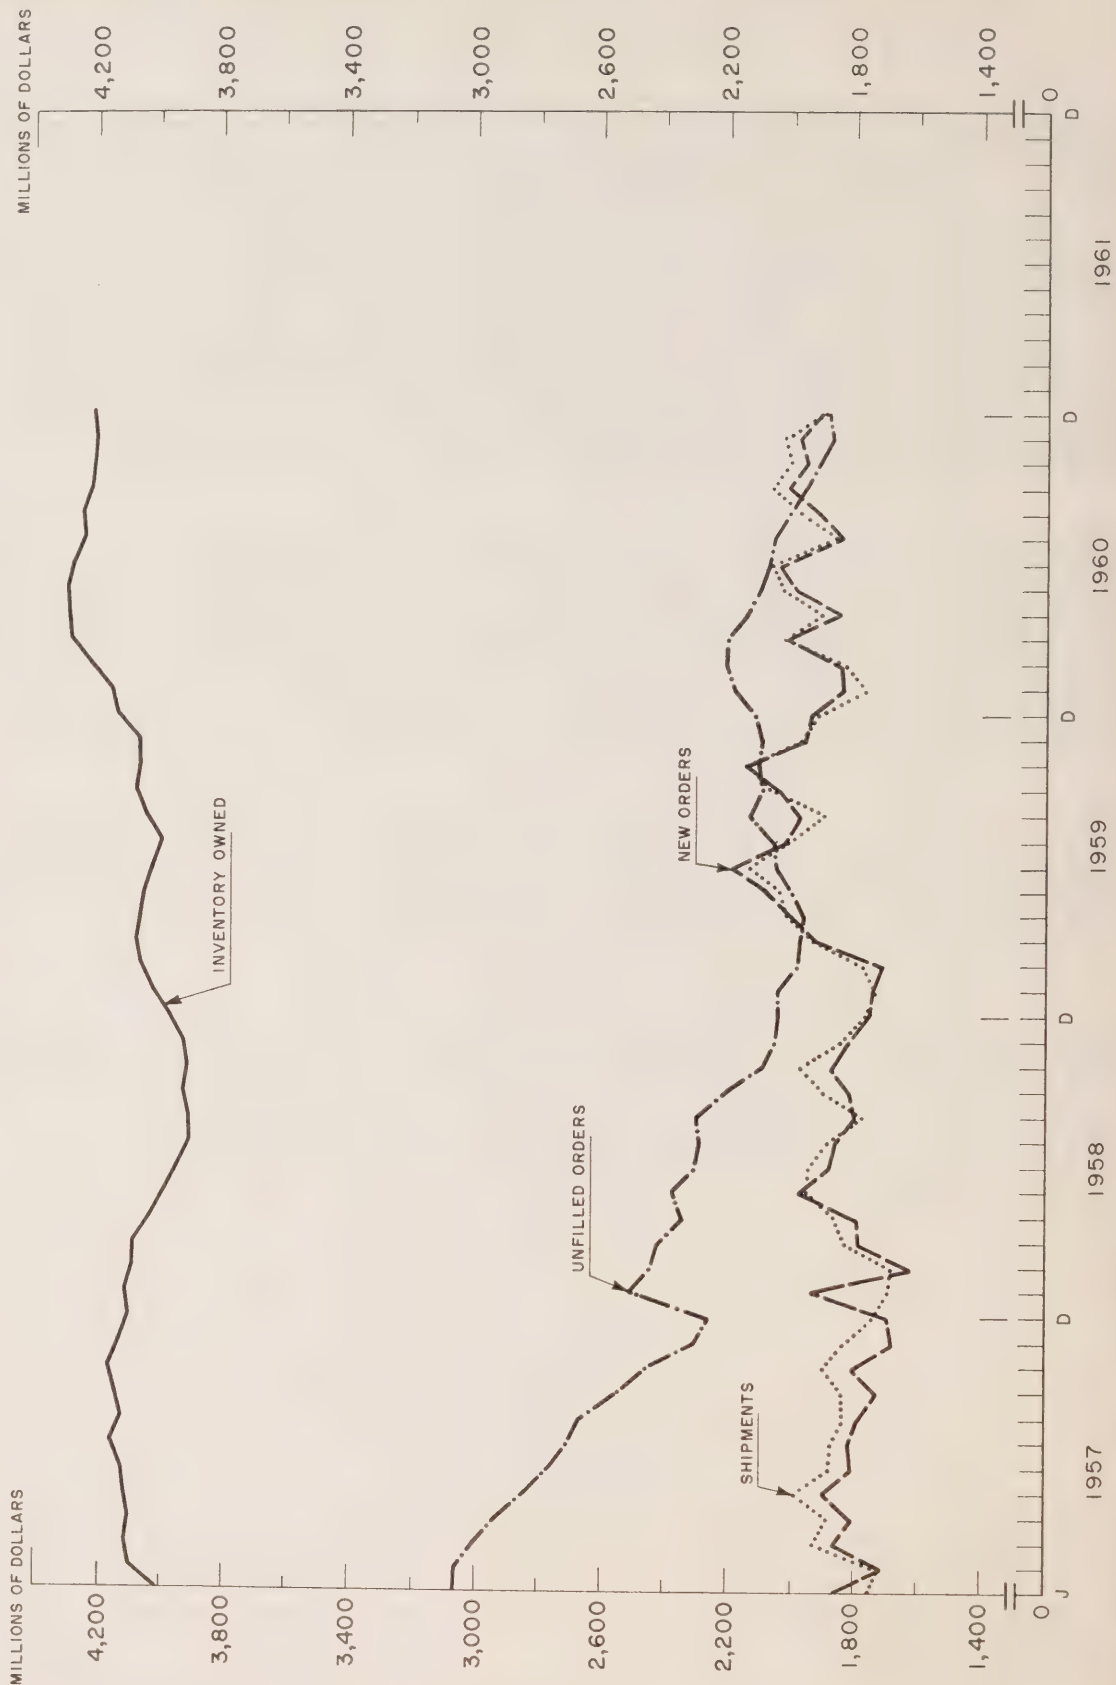

SHIPMENTS: - The annual revision of the monthly shipments series to base current survey trends on the latest available census data was advanced to July this year when the 1958 census values became available. Consequently no revisions have had to be made to 1959 and 1960 shipments at this time. The changes in the 1960 series have consisted chiefly of revisions for late returns in the earlier months and some adjustments to the group of reporting firms. One additional major revision was made to the shipments values in the petroleum industry for 1959 and 1960 which is also reflected in the total shipments figure. This revision consisted of lowering the level of valuation of petroleum products from a distributor's price to a refinery price. Since distribution operations accounted for a substantial amount in the former price it was considered preferable to separate them from the manufacturing operation and value the shipments out of refineries at this point.

INVENTORIES: - Values from the 1958 Census of Industry have been incorporated as benchmarks in the inventory series. All monthly values for 1958 have, therefore, been adjusted to spread the error in the series as at December, 1958 equally over the preceding 11 months and all monthly estimates from January, 1959 on have been adjusted to project the December, 1958 values. In addition the month end values for 1960 have been revised to include reports which arrived too late for incorporation in the estimates as they were published during the year.

ORDERS: - Values for the 1958 orders series and for the subsequent years were revised in July this year on the basis of the 1958 census values. Changes at this time consist largely of revisions to include late returns. There were also some slight modifications in the sample in a few industries.

TRADING OUTLETS: - The trading outlets values have been revised on the basis of a special 1959 year-end survey of manufacturers' trading outlets. Values of shipments and inventories for 1960 have been revised to incorporate 1959 values. The revision in the shipments values in the petroleum industry at the refinery level for 1959 and 1960 was accompanied by revision in the trading outlet values for certain firms.

# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

TREND SUMMARY

Manufacturers' shipments in 1960 are estimated at \$23,464 million slightly higher than the previous peak reached in 1959 of \$23,353 million. Since shipments in this past year only exceeded shipments in 1959 in the first quarter the emphasis should more properly be placed on the fact that shipments in 1960 were maintained and did not fall below the level of the previous year.

The break in shipments between the first and second quarters was fairly general throughout all industries although much greater in the durable goods than in the non-durable goods industries. Shipments in the durable goods industries in the first quarter of 1960 were eight percent above shipments in the first quarter of 1959 and in the non-durable goods industries were nearly three percent higher. In the second quarter shipments from the durable goods industries fell to ninety-five percent of shipments in the second quarter of 1959; in the non-durable goods industries they were maintained at just over the 1959 level. The only durable goods industry groups where the break did not occur were the transportation industries (S.I.C.11) which were generally lower for the first ten months of the year and in the non-metallic minerals industries (S.I.C.14) where the contrast between the first quarter shipments, ninety-eight percent of the 1959 value, and the remainder of the year, at ninety-six percent, was relatively minor.

In the non-durable goods industries shipments were in total higher in each quarter than in the corresponding quarter of 1959 although the three percent advance in the first quarter was not reached again during the rest of the year. The largest group of industries in this group, food products, however, remained fractionally below 1959 shipments throughout the year. Tobacco and paper products had shipments up by three percent over the year before with a substantial advance in the first quarter (fourteen and eight percent respectively) followed by more moderate ones in the last three quarters. Rubber and leather products were down considerably over the full year with the sharpest drop in the second and third quarter. Shipments in the primary textile industries were sustained at levels comparable with 1959 in the first half of the year but rose to exceed 1959 shipments in the third quarter by four percent and in the fourth quarter by nearly nine percent. The movement in the petroleum and coal industries was in contrast also with the general pattern in 1960 as shipments rose in the second quarter to exceed 1959 shipments by over four percent. Shipments in the chemical products industries also showed a second quarter high as compared with 1959 but this, although higher than usual, is undoubtedly the result of the increased use of fertilizers with the customary seasonal upswing in the spring. The miscellaneous industries group followed the pattern of high shipments in the first quarter followed by a decline in the second but shipments in the year were ten percent above shipments in 1959 with the year's high in the third quarter where they were twelve and one half percent above shipments in the previous year.

In knitting mills and clothing shipments were down fractionally from the previous year and were fairly consistently lower in each quarter except in the fourth quarter where shipments were one percent higher.

In the durable goods industries the wood and wood products industries, the iron and steel industries and the electrical apparatus and supplies industries all showed increases in the first quarter (from nearly six percent in wood and wood products, ten percent in the iron and steel industries and over eight percent in electrical apparatus and supplies) as compared with the first quarter of 1959 followed by a decided drop in the second quarter. During the rest of the year the lower level of shipments resulted in yearly totals five and six percent lower than the previous year.

The transportation and non-metallic minerals industries did not show a similar high level of shipments in the first quarter but ran four to five percent below 1959 shipments from the beginning of the year. In the non-metallic minerals industries this continued for the full year but in the transportation industries a sudden increase in November sent shipments in the last two months up fifteen percent over last year's.

The non-ferrous metals group showed a very large increase in the first quarter, a twenty-nine percent increase over the corresponding quarter in the previous year, but the subsequent decline did not take place until June when shipments fell over five percent below shipments in June 1959. Shipments in the year 1960 were almost nine percent above shipments in these industries in 1959 in spite of a decline again in December of two percent below shipments in December 1959.

Manufacturers' inventories began to accumulate in the summer of 1959 with a sharp upward movement in August of that year which with the exception of a decline in October and November continued until May of 1960. Since last June inventories have been moving downward, the decline in inventory

held being much more pronounced than in inventory owned as inventory held under progress payments has been declining steadily since 1958. The combination of these two trends brought inventory held at the end of 1960 below the level of inventory held at the end of 1959, the lowest point during the year and the first time inventory held had fallen below the 1959 level. Inventory owned moved down but more gradually which left the level at the year's end two percent above the level at the end of 1959 although also at the lowest point since the beginning of the year.

The movement of the components of inventory held was quite dissimilar. Inventories of raw materials remained relatively stable during 1960 continuing at very much the level which was established in the last four months of 1959. There was a minor increase in July and August this year followed by a decline again in September which largely reflects the seasonal increase in inventories in the foods industries. The difference in the level of raw materials inventories at the end of 1960 as compared with 1959 was only fractional but inventories were higher.

Finished products inventories were also higher in 1960 than in the previous year and although here also the year end difference was the lowest at any time during the year they showed an increase of nearly five percent over the previous year. The rapid accumulation of finished goods inventories from December 1959 to March 1960, an increase of ten percent, was held at this level in the second quarter of the year to be followed by a gradual decline from June to December of five percent.

Goods in process inventory in contrast to both raw materials and finished products never reached a level in 1960 above the level in the corresponding month in 1959 and ended up the year nearly eight percent lower. The spread between the level this year as compared with last year widened from August on reaching its maximum in October when goods in process inventories were nearly ten percent less. This decline probably reflects both the adjustment by manufacturers to reduce operations as shipments fell off at the beginning of the summer and the continuing downward trend in inventory held under progress payments most of which is held as goods in process.

The contrast in the movement of the three components of inventory held between 1959 and 1960 is even more evident when the non-durable and durable industry groups are considered separately. In the non-durable industries the rise in total inventory which began in August 1959 continued until March of this year with the major part of the accumulation taking place in finished products although the accumulation of raw materials stocks from October to February was marked. Raw materials stocks declined fairly regularly until mid 1960 and since August have been moving upward again in a movement very similar to the trend in the corresponding months of 1959. Goods in process inventory which is a very small proportion of inventory held in these industries remained stable throughout the year. Consequently while the accumulation of raw material stocks and stocks of finished products in these industries contributed to the general rise the decline in goods in process inventory last year was concentrated entirely in the durable goods industries.

The build up in raw materials stocks in the durable goods industries above the level of the previous year did not show up until April when the greater part of the increase, in absolute terms, had already taken place. It would appear as if the maintenance of stocks at a higher but stable level during the second and third quarter of the year in contrast to the lower level during the same months of 1959 reflected a slowing up of production as inventories of finished goods were accumulated. The decline in goods in process inventory during the year is also indicative of a lower rate of production. The level of goods in process inventory during 1960 began at a level seven percent below the level in 1959 and continued at about this much below the previous year until the end of July. From August until the year's end goods in process inventory declined at a faster rate than the previous year so that the level at the end of December was only eighty-eight percent of the level the year before. It should however be added that this decline in part reflects the decline in inventory held, but not owned, most of which is included with goods in process.

Unfilled orders during 1960 fell by eleven percent in all industries combined and by nearly thirteen percent in the durable goods industries. The rise in unfilled orders which began in May 1959 with a rather steep increase until August declined slightly in September but continued upward from September through the first quarter of 1960 at a lower rate. The drop in April 1960 of three percent was the start of a steady downward movement which did not level off until December. The level of unfilled orders in both all industries and in the durable goods industries was fractionally higher at the end of December than at the end of November.

(1) Includes Pig Iron, Steel Ingots and Castings, Rolled Iron and Steel Products and Ferro-Alloys. (2) The value of inventory held but not owned in this industry is very small, and sample coverage is not adequate to provide separate data. Estimates of this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned as well.

(1) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries group. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

### INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described on page 81.

CONCEPTS, METHODS AND LIMITATIONS

C O N C E P T S

PLANT SHIPMENTS, ORDERS, AND INVENTORIES (Tables 1, 2, 3, 4, 5 and 7):

Shipments - represent an estimated projection, on a monthly basis, of the latest available Gross Value of Factory Shipments from the annual Census of Industry. In the majority of cases, Census of Industry values include (a) sales from manufacturing plant of products made at the plant, (b) amounts received for repairs or custom work, (c) shipments of goods manufactured in the plant for further processing in another unit of the same company, and (d) shipments of finished products to manufacturers' sales branches for sale, for each establishment included. The value level used is defined as "factory selling value". Goods purchased for re-sale without further processing are not included. (1)

New Orders - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - are defined as estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled. (Since progress payments are treated for this survey as sales in the month received, total unfilled orders reported each month by firms operating on a progress payments basis are reduced by the total of progress accounts for these firms.) This definition of Unfilled Orders is therefore an expression in terms of future shipments values.

---

(1) There are a few exceptions to the definition of Census of Industry values given above:

- (i) In two industries, Sawmills, and Slaughtering and Meat Packing, custom work is valued at the estimated selling value of the product rather than by the amounts received for such work.
- (ii) In nine industries (Fish Processing, Veneer and Plywoods, Sawmills, Pulp and Paper, Non-Ferrous Metals, Smelting and Refining, Coke and Gas Products, Petroleum Products, and Miscellaneous Products of Petroleum and Coal) the Census of Industry values represent production of finished goods rather than shipments. For these industries the Census of Industry values are adjusted by change in finished products inventory before projection for the monthly series.
- (iii) In four industries, Fabricated and Structural Steel, Aircraft, Railroad Rolling Stock and Shipbuilding, the Census of Industry value is for "work done during the year", i.e. production of finished goods plus change in goods-in-process inventory during the year, rather than shipments. For these industries, the Census of Industry values are also adjusted by change in finished products inventory before projection for the monthly series.

There are three industries apart from those listed under (ii) and (iii) above, for which adjustments to Census of Industry values are made before projection for the monthly series. In the Flour Milling, Brewing and Fruit and Vegetable Preparations industries, all of which are characterized by large seasonal variations, many large firms operate on fiscal year periods (which are used in Census of Industry compilations) differing from the calendar year. In unusual years the projection of Census of Industry values for these industries, as if they represent calendar year values, could cause considerable distortion in the estimates. To avoid this, the Census of Industry values from 1954 on have been adjusted to estimated calendar year values before projection. This adjustment is based on values reported to the monthly survey.

Firms operating on long-term contracts represent a special problem for the monthly series. The value levels projected are those of the Census of Industry as described in the first paragraph (except for the four industries described under (iii) above). However, for the monthly series, all progress receipts on long-term contracts are included as sales in the month received, instead of the total sale being included in the month the sale is finalized. It is felt that this treatment gives a better indication of monthly activity but it does allow possible distortion of value levels in that, for the Census of Industry value which is being projected, any final sale will be recorded in one specific year, while the monthly series may have spread this sale over more than one calendar year. Since the bulk of the value of long-term contract work falls in the four industries noted (in (iii) above), for which adjustments for work done are made in compiling the Census of Industry value, this inconsistency does not affect the all-industry or group totals to any great extent.

---

Total Inventory Owned - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of:

- (a) raw materials;
- (b) goods in process;
- (c) finished goods of own manufacture at plant and warehouse;
- less (d) value of inventory held but not owned. This item cannot be assigned to specific components.

Since the series relates to manufacturing inventory only, the value of inventory of goods purchased for re-sale without further processing is not included.

Inventory Held but Not Owned - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory - some firms treat progress receipts as sales and reduce book value of inventory as payments are received; in some of these cases they no longer have records of actual holdings above the book value level. Wherever estimates are available, these have been included, but the estimated value of inventory under this heading must be considered, to some extent, incomplete.

Total Inventory Held - represents the estimated total book value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from total inventory owned because of the inclusion of inventory held under progress payments arrangements. It includes items (a) to (c) as shown above under total inventory owned.

Inventory Components: Raw Materials, Goods in Process, and Finished Products, are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to make definitions of components appropriate to each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Table 3, are defined according to the Standard Industrial Classification Manual.

The Economic Use groups of industries (Table 4) were designed to facilitate the analysis of trends by a grouping based on the use made of each industry's products i.e. on the main demand factors affecting each industry. In drawing up this classification the groupings were designed to tie in with National Accounts concepts as closely as possible; as a result the three main groupings - Consumer Goods industries, Capital Goods industries, and Construction Goods industries - contain only industries producing mainly final products in each of these categories. Only industries in which substantially more than half the production is of items clearly belonging to one or other of these three specific categories or industries in which half the production falls into one such category and the remainder is scattered over two or more other categories, were assigned to one of the main groupings. All other industries were assigned to a miscellaneous category which was sub-divided into four further groupings of related industries: Industries Producing largely for Export, Intermediate Goods and Supplies, Motor Vehicles and Related Industries, and a final unclassifiable group. The latter groupings cut across the Economic Use criteria to some extent. For further detail on the considerations leading to the assignment of industries for these groupings reference should be made to the December, 1955 report.

TRADING OUTLETS SALES AND INVENTORIES (Table 8): See page 74.

Trading Outlets are defined as any establishments operated by manufacturers, apart from their plants (or plant warehouses), which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock or which carry small quantities for demonstration purposes are not included. Sales arranged by outlets carrying stock but shipped direct from plant are excluded wherever possible. Inventories of trading outlets include any holdings at warehouses which serve the outlets. Other warehouses, unless they have sales staffs, are excluded.

The Trading Outlets series has two purposes:

- (a) To clarify the manufacturing shipments and inventory series by excluding distribution activity (the extraneous activity which is most commonly included in reports by manufacturers) so that the manufacturing series is confined, as far as possible, to plant activities only at plant value levels;
- (b) To provide as complete and consistent a series as possible on manufacturers' distributional activity, so that this can be combined with the manufacturing series, if desired, for analytical purposes; or combined with data for independent wholesalers to provide a more complete picture of current wholesale activity than has previously been available.

Trading Outlets may or may not be separately incorporated wholesale companies. The majority of them are not separately incorporated. Any separately incorporated wholesale company owned by a manufacturing company or by a group of manufacturing companies is, however, included if the bulk of its sales are of goods manufactured by the owning or associated companies. Since it is obvious from the reports received that almost all unincorporated outlets handle mainly the products of the owning manufacturing company the Trading Outlets series may be taken to represent the activities of establishments the main function of which is to distribute the products of the manufacturing companies which own them.

This series was first published a year ago in the December 1958 bulletin. It is still to some extent in the experimental stage in the sense that the universes which are being projected monthly are not necessarily final, and the levels of the published data are, therefore, subject to revision over the next few years. In addition, only part of the total material collected for the series is considered adequate for publication at this time. It has, however, rectified to a large extent two areas of inconsistency in previous reports, one practical and the other conceptual.

The practical inconsistency was that many companies selling entirely or partially through their own sales organizations find it simpler to report total company sales monthly than to report "shipments leaving plant", which may be either final sales or shipments to their own selling outlets. Such reports were previously accepted in a large number of cases but were used to project the latest available Census of Industry values, which are generally defined as shipments from plant at plant selling value. For many of these companies it has now been possible to arrange for a monthly report covering an estimated value of plant shipments at plant selling value, in addition to the company sales figure. The former is now used for compilation of shipments values for Tables 1 to 5. To the extent that trends in the plant shipments series were being distorted by use of company sales values rather than plant shipments values this change represents an improvement. (It should, however, be noted that the change has not yet been possible in all relevant cases.)

The conceptual inconsistency was that, while shipments represented plant level shipments, the finished products inventories values previously represented total finished products owned by manufacturers, whether held at plant, warehouse or trading outlets, rather than plant finished products only. The two separate series, one for plant, and the other for trading outlets, now each cover sales and inventories for comparable activities.

(It should not, however, be assumed that the plant finished products series and the Trading Outlets inventory series are, when summed, the exact equivalent of the previous manufacturers' finished products series. As a matter of fact, they are reasonably close to being equivalent, but the former finished products series included some retail store operations of manufacturers (retail operations are excluded from the Trading Outlets series) and the Trading Outlet series includes a number of separately incorporated wholesale companies which were not previously included.)

The problems which have been raised by a separate series covering sales and inventories of Trading Outlets are due basically to difficulties of response. The major problems are:

- (a) In the cases remaining where it is still impossible to obtain plant level shipments values on a monthly basis it is often also impossible to obtain plant level finished products inventory holdings separately from Trading Outlets holdings. The inventory breakdown is, in these cases, available only at year-ends. There is, therefore, an element of uncertainty in the monthly finished products trends for the two series when used separately which did not exist when the two elements were combined. For one industry group, Tobacco Products, it was impossible to obtain separate Trading Outlets data, so total finished products inventory values for this group were left in the manufacturing series.

- (b) In a number of cases, Trading Outlet sales and inventory values, while easily available separately from plant values, are not available broken down as between "goods of own manufacture" and "goods purchased for re-sale". This is more often the case with separately incorporated wholesale companies than with other outlets. In most industry groups enough reports are available which distinguish between own and purchased goods to make a separation of values under this heading feasible. For one industry group, Petroleum Products, the separation is, however, not possible, so total sales and inventories have been included under the heading of "goods of own manufacture" for this group.
- (c) In a number of cases where the separation, by the appropriate reporting firms, of plant level shipments and Trading Outlets sales is not yet available it has been possible to estimate Trading Outlets sales of goods of own manufacture on the basis of the total sales figures for the companies concerned and the probable proportion of total sales which are being made through outlets. It did not, however, appear possible to estimate sales of purchased goods in these cases, because of the wide range of ratios of own to purchased goods in the sales values reported by the remaining companies. It is hoped that some improvement can be made in this area in the coming year. In the meantime, with the exception of the Electrical Apparatus and Supplies group where practically no estimating problem occurs, it is felt that the estimates of sales of goods purchased for re-sale do not yet warrant publication. This problem is not so acute for inventory values of goods purchased for re-sale, since year-end values at least are generally available for own and purchased goods separately, but it is felt that publication of this item should be postponed until comparable sales values are available.

Many of the companies operating trading outlets are multiple-unit firms with operations crossing two or more individual industries. No attempt has been made to obtain detail at this level for the Trading Outlets series. This means that the industry-group (e.g. Foods industries, Iron and Steel Industries) is the smallest unit for which data can be shown separately. There are a few cases where outlet operations cut across two industry-groups, and in these cases the values have been assigned to the group in which the bulk of the manufacturers' production falls.

Because of the relatively small number of companies included and because, on the whole, this type of operation tends to be large it can be expected that, when a company gives up its distributing organization or when new organizations are set up, the effect on the series will be to cause considerably larger sudden changes than are common in the plant shipments and inventory series.

#### METHODS

##### (a) Current Estimates -

For eight series (plant shipments, raw materials, goods in process, plant finished products, inventory held but not owned, unfilled orders, trading outlets sales, and trading outlets inventories,) current value estimates for each industry covered are made by applying the monthly percentage changes shown by the unweighted group of reporting firms in each industry to the latest available benchmark values for the same industries. Industries not covered are carried at the latest available benchmark levels.

(The above is subject to a few exceptions. In one industry, reporting firms are treated as a stratum sample, rather than as an unweighted group. In three industries, available physical data on stocks and shipments are valued using price indexes. In three industries, shipments estimates are based on employment data and price indexes.)

Total inventory held in each industry is the sum of the estimated values for raw materials, goods in process, and finished products. Total inventory owned in each industry is calculated by deducting the estimated value for inventory held but not owned from estimated total inventory held. Value of new orders in each industry is derived from estimated shipments and unfilled orders using the formula "Unfilled Orders at end of previous month plus Net New Orders during month less Shipments during month equals Unfilled Orders at end of Current month".

##### (b) Benchmark Revisions -

As new benchmarks become available, estimates for the year to which the benchmarks apply are revised as follows:

- For the plant shipments series, the Census of Industry value for the year for each industry is spread by months according to the trend shown by reporting firms in the original estimate for that year.

- For the trading outlets sales series, the estimated value for the year, obtained from the Annual Trading Outlets survey, for each industry is spread by months according to the trend shown by reporting firms in the original estimate for that year.

For the five basic inventory series (raw materials, goods in process, plant finished products, inventory held but not owned and trading outlets inventory) and the unfilled orders series, where the benchmark values apply to the Year-End rather than to the entire year as in the shipments series, the error in the original estimate for the year-end for each industry is assumed to have accumulated equally over all twelve months of the year (i.e., one-twelfth of the amount of the error is added to the original estimate for January; two-twelfths is added to the original estimate for February; three-twelfths to March and so on).

The three derived series (total inventory held, total inventory owned, and new orders) are re-calculated on the basis of the revised data for the other six series.

#### LIMITATIONS TO THE USES OF THE DATA IN THIS REPORT

- (1) Data for individual industries should not be interpreted as commodity data, since very few industries produce only one commodity or only one class of commodities.
- (2) Since the series are in terms of current values, changes over time may be the result of both price and volume changes. Some indication of the extent to which changes in value are due to price changes, thus isolating the physical change which has taken place, can be obtained by reference to the wholesale price index. This procedure is, however, inadequate for anything more than a general indication of trends. The main problem is that the wholesale price index is a commodity price index, while the shipments, orders, and inventory series are industry series with the possibility of changes in commodity content over time. These changes in commodity content could seriously affect the weighting pattern to be applied to price indexes considered applicable for any specific industry. In considering inventory values turnover rates and valuation methods are other important variables which should be taken into consideration but for which adequate data are seldom available.
- (3) Shipments data do not necessarily represent market sales for the manufacturing universe.  
(a) Apart from the few exceptions as noted under (b) below they are defined (see page 57) to include total movement of goods out of manufacturing plants (or, in some cases, divisions of plants); shipments of goods for further processing by other plants of multiple-unit companies are, therefore, included as well as shipments for sale. (b) In a few special cases, the Census of Industry values include goods in-process change, and for these cases progress receipts on long-term contracts are included as shipments as they occur, rather than at the time sales are finalized. (c) Many manufacturers re-sell purchased goods, in addition to sales of their own products and these re-sale items are not included.
- (4) The component breakdown for inventories is on an establishment, not a commodity, basis. Since each manufacturer reports inventories as on his own books, both for the monthly and annual surveys, and since a number of industries contain plants at various stages of processing, the finished products for one plant might represent commodities which would be considered raw materials or goods in process for another plant in the same industry. The composition of each industry must be studied before attempting to use the component breakdown as applicable to the industry as such, rather than to the firms in the industry.
- (5) For Unfilled Orders, the following reservations apply:
  - (a) The series, by definition, excludes plants producing entirely for stock. Since approximately 40% of manufacturing is done by such plants the trends shown are not necessarily applicable to manufacturing in general.
  - (b) Since the series is defined as "unshipped" orders, rather than "unproduced" orders, there is always the probability that some of the Unfilled Orders are accounted for in inventory holdings. The reduction of unfilled orders by progress receipts eliminates to a considerable extent the effect of large goods-in-process holdings in connection with long-term contracts, but the amount of the remaining inventory, either goods-in-process or finished products, which is held in connection with existing unfilled orders would be difficult to evaluate.
  - (c) The series includes total orders, not just those considered as "binding", so estimates of future shipments trends based on these may be overstated due to the possibility of cancellations.
  - (d) Unfilled Orders for all industries include to some extent a duplication due to the fact that orders for final products in one industry may result in orders to firms at secondary or primary stages of processing. Since the total gross value of shipments will contain the same duplication, this does not invalidate the series for purposes of analysis. However, the total impact of any one order on future shipments levels will not necessarily be shown in the Unfilled Orders series since at any stage an order may be filled from stock rather than added to existing backlogs.

- (6) The Economic-Use grouping of industries (Table 4). The difficulties involved in classifying both commodities, and industries on the basis of commodities made, are sufficient to limit the usefulness of this compilation to indications of trends only. The main difficulty is that many commodities may be used for different purposes which cut across classification lines. Depending on the use made of it, the same product may be a "final" product or a component part; or a final product may be used for consumption, capital equipment, or in construction. A second difficulty is that the basic data for this survey are in terms of estimates for individual industries not for commodity data. An industry is a group of establishments primarily concerned with the production of a specified product or class of products. Many establishments produce other commodities in addition to those with which they are primarily concerned and, as a result, very few industries can be considered "pure" in the sense that they produce only the product or class of products implied in their title. Therefore, many industries which might fall quite clearly into specified groups on the basis of the chief use of their main products are much less clear-cut when the additional commodities produced in the establishments concerned are considered.

In this classification only those industries in which substantially more than half the production is of items clearly belonging to a specified grouping or in which half the production is of such items and the remainder is scattered over two or more groups were assigned to the main categories; all industries which could not be so assigned were placed in the "Unclassifiable" category. This means that the inclusion of extraneous commodities is kept to a minimum. It does not, unfortunately, do anything about the fact that each category does not necessarily include all important relevant items. The grouping that is most seriously affected by the forced exclusion of relevant items is the Durable Goods sub-group of the Consumer Goods category. It does not contain the consumer portion of the Automobile industry and, in addition, it does not include the stove portion of Heating and Cooking Apparatus, since the latter industry had to be assigned to the Unclassifiable group. On the other hand, it does include two large industries with important production of items which should not be assigned to Consumer Durables - these are the Furniture industry, which produces office and store furniture as well as household furniture; and the Radios and Parts industry which also produces electronic equipment. The sub-category "Other Capital Goods Industries" contains the highest proportion of industries in which only about half of total production actually should be assigned to the specific grouping but where the remainder of production is dispersed over a number of other groupings. It is, however, felt that this dispersion is not so likely to result in distortion as is possible with the large specific items involved in the Consumers' Durable Goods group.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries groups. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and therefore, of New Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

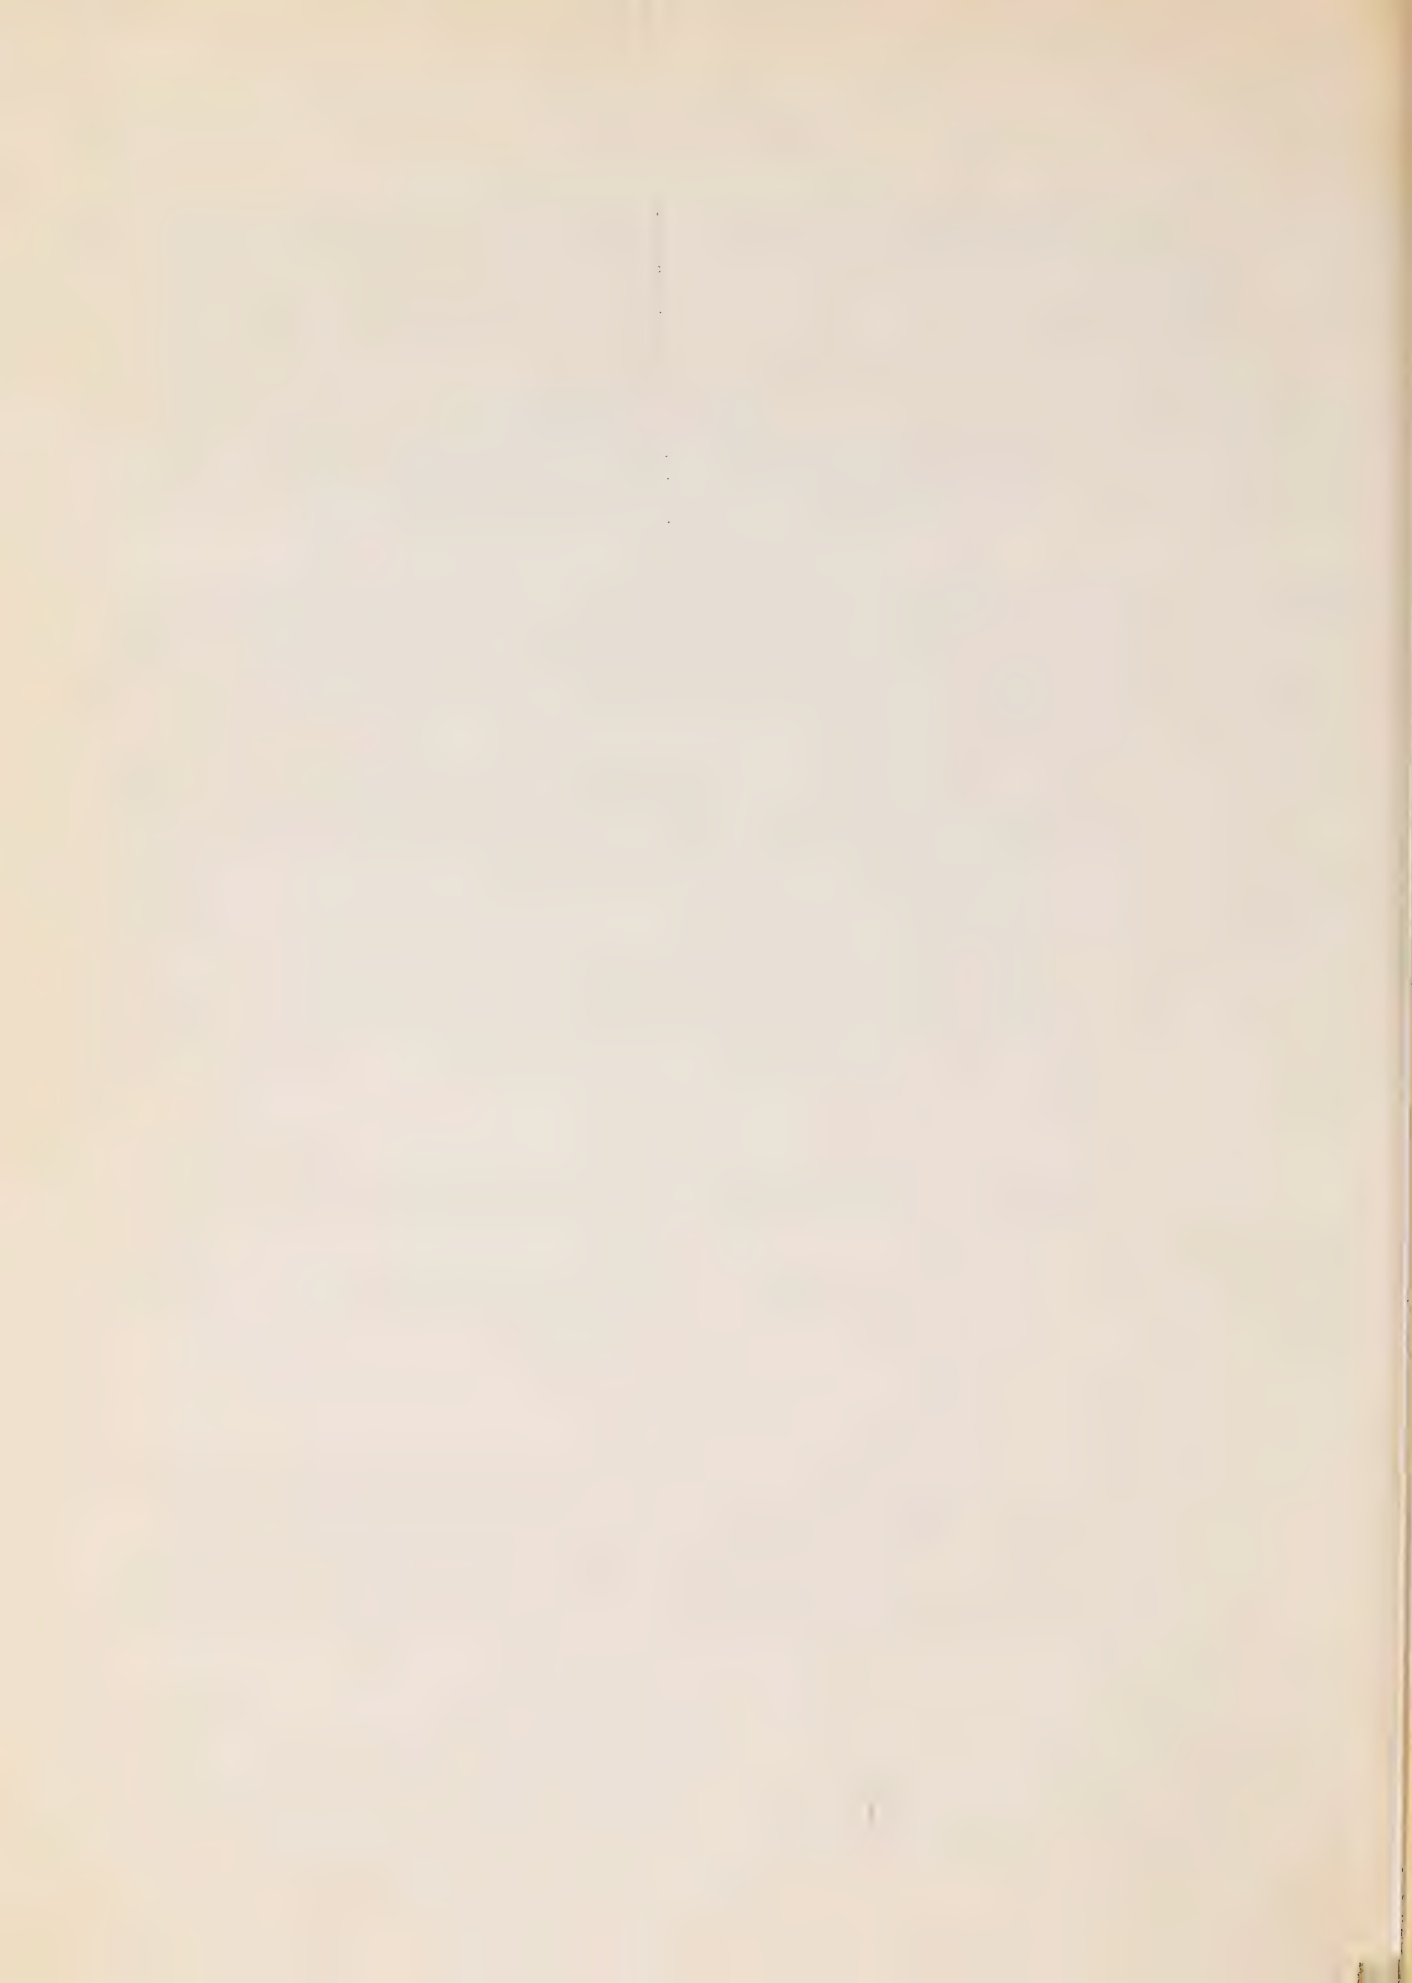

TABLE 7. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 8. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.
